CONNECT WITH US

ALL INTERNATIONAL CUSTOMERS

(Outside of North America, Europe or India) Please contact Stoelting's North American office for assistance.

SALES INQUIRIES

Please contact our Sales Department at Stoelting with Neuroscience or ANY-maze related sales inquiries.

TECHNICAL ASSISTANCE

Neuroscience

Please contact our Neuroscience Technical Staff at Neuro@StoeltingCo.com for technical assistance.

ANY-maze

Please contact ANY-maze Support at Support@ANY-maze.com or TechSupport@ANY-maze.com for technical assistance.

ORDERS

Orders may be placed by phone, fax, e-mail (orders@StoeltingCo.com) or through our website at www.StoeltingCo.com. For orders placed in the U.S., Canada and Mexico, please address your order to Stoelting Headquarters located in Wood Dale, IL.

For orders placed in Europe, please address your order to Stoelting Europe.

For orders placed in India, please address your order to Stoelting India.

All International orders (outside of North America, Europe and India) please contact our North American office for further assistance. Payments can be made using a credit card (Visa, Mastercard, American Express), bank transfer or purchase order (PO; pre-approved accounts only).

RETURNS AND REPAIRS

Please contact our Returns Department at Stoelting for assistance with your return/repair. All returned items must be assigned a Return Materials Authorization (RMA) and be accompanied by a completed Equipment Decontamination form. Any merchandise that has not been assigned an RMA or does not include the Equipment Decontamination form will be returned to the sender. A restocking fee may be applied to all returned merchandise at the discretion of Stoelting Co. Customized equipment is not eligible for return. Following inspection, you will be contacted with a repair estimate prior to initiation of the repair. Repair costs can be paid by VISA, MASTERCARD, AMEX, bank transfer or purchase order (PO; pre-approved accounts only).

WARRANTY INFORMATION

Stoelting Co. warrants its products against defects in materials and workmanship for a period of one-year from the date of shipment. For warranty repairs, please include a copy of your original invoice.

**Prices and product availability subject to change without notice. Call or visit www.StoeltingCo.com for current prices.*

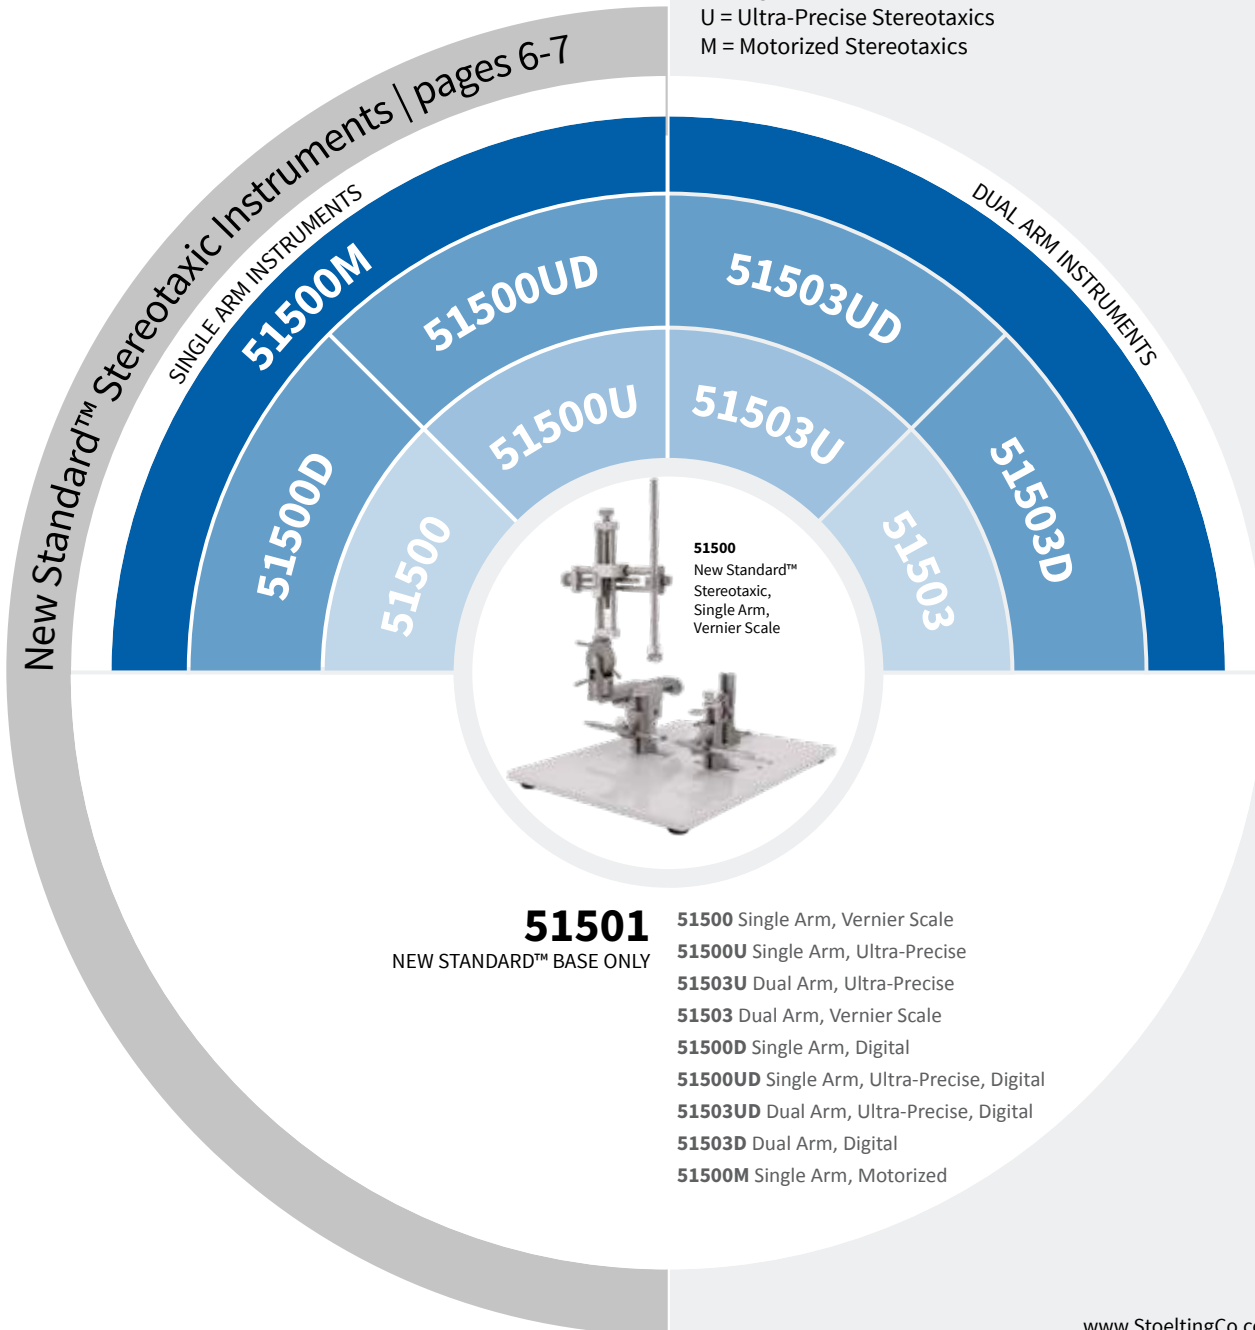

We thank you for your interest in Stoelting products, and look forward to serving you today, and in the years to come.

Rat and Mouse Stereotaxic Instruments

New Standard™ Stereotaxic Instrument for Rat and Mouse

The innovative design of the New Standard™ Stereotaxic Instrument provides users with the ability to perform surgeries on a Mouse or a Rat on the same base. The New Standard™ includes a 100 micron 3-axes, left-hand manipulator arm, separate rat and mouse adaptors, dual-sided (traditional and non-rupture) rat ear bars, dual-sided mouse ear bars, and corner-clamp probe holder. Also, available as Dual, Ultra-Precise, Digital or Motorized.

New Standard™ Features

- No U-Frame maximizes operating space
- Designed for a Rat or a Mouse on the same base
- Vertical and horizontal adjustment of ear and nose posts accommodates rodents of all sizes
- Scales at ear and nose posts allows for precise positioning
- Comes standard with integrated warming base!
- Gas anesthesia compatible

Equipped with Warming Base!

See pages 38-39

Sign up now for our 3-day workshops for learning stereotaxic surgical techniques at the Jackson Laboratory. Scan for details, or visit www.jax.org/stereotaxic

Revolutionary design has eliminated the U-frame allowing for greater flexibility and access to the animal.

Rat Stereotaxic Instruments

Classic Lab Standard™ Stereotaxic Instruments for Rats

The Classic Lab Standard™ Stereotaxic Instrument has been a standard in research labs for nearly five decades. The time-proven U-Frame design provides stability and adaptability while the instrument's exclusive, triple-lead screws allow for smooth, consistent movements with rapid positioning. The Classic Lab Standard™ includes a 100 micron, 3-axes, left-hand manipulator arm, rat adaptor, dual sided (traditional and non-rupture) ear bars, and corner-clamp probe holder. Also available as Dual, Ultra-Precise, Digital, Ultra-Precise Digital, or Motorized.

Lab Standard™ Features

- Low cost
- Classic U-Frame design
- Interchangeable adaptors (for Mice or Rats)
- Gas anesthesia compatible
- Absolute lock at 90° vertical
- Dual-sided (traditional and non-rupture) ear bars
- **Comes standard with integrated warming base!**

The classic **U-frame** design has been a **standard in research labs** for nearly five decades!

Mouse Stereotaxic Instruments

Just for Mouse™ Stereotaxic Instruments for Mice

The **Stoelting Just For Mouse™ Stereotaxic Instrument** was specifically designed for use with knock-out and transgenic mice. Includes a 10 x 10in (25 x 25cm) square base; 100 micron; 3-axes; left-hand manipulator arm; triple-point mouse and ear bars; snout clamp, and corner clamp probe holder. Also, available as Dual, Ultra-Precise, Digital, Digital Ultra-Precise, or Motorized.

Just for Mouse™ Features:

- Dual-arm capable
- Small footprint
- Compact and cost-effective
- Ideal for knock-out and transgenic mice
- Offers multiple head-holding options
- Vertical post adjustment
- Gas anesthesia compatible (see product 51609M on page 26)
- Comes standard with intergrated warming base

51730 Just for Mouse™ Stereotaxic Instrument

The smallest stereotaxic making the biggest impact.

Most affordable stereotaxic available!

Traditional (18°) ear bars with rubber tips included.
Non-rupture (45°) ear bars available upon request.

Motorized Stereotaxic Manipulator Arms

NEW!

Stoelting's Motorized Stereotaxic Manipulator Arms

Stoelting's Motorized Stereotaxic Manipulator Arms are designed for fast, accurate positioning during stereotaxic surgery. Ideal for inexperienced users, the motorized manipulator arms employ a touchscreen display and joystick controller for easy-to-control movement of each axis. Manual movement available anytime.

The joystick controller allows remote control of Optional Drill and LED light features.

Motorized Manipulator Arm Features:

- Automatic motorized movement using touchscreen display
- Various speeds (4mm/s to 0.1mm/s)
- Manual option always available
- Optional Drill feature
- 10µm movement
- Joystick Controller Included

51600M Motorized Lab Standard™ Stereotaxic Instrument shown with optional Drill, not included.

Compare to Neurostar's Robot Stereotaxic Instruments. See page 16.

Stereotaxic Upgrades & Conversions

Motorized Conversion

Stoelting's Motorized Stereotaxic Manipulator Arms are designed for fast, accurate positioning during stereotaxic surgery. Ideal for inexperienced users, the motorized manipulator arms employ a touchscreen display for easy-to-control movement of each axis. Manual movement available anytime. Optional Drill feature available.

Motorized Manipulator Arm Features:

- Automatic motorized movement using touchscreen display
- Various speeds (4mm/s to 0.1mm/s)
- Manual option always available
- Optional Drill feature
- 10 μ m movement

MOTORIZED CONVERSION

51604MOT	Conversion to Motorized, 3-axes, Left

Keep your Stereotaxic Base and upgrade with new Motorized Axes!

Lab Standard™ Stereotaxic Instrument

Motorized Lab Standard™ Stereotaxic Instrument

Stereotaxic Care and Maintenance

- Wipe your stereotaxic instrument with soap or a mild detergent.
- Keep your stereotaxic instrument free of dust and debris.
- Never autoclave your stereotaxic instrument.
- Sterilize your stereotaxic instrument using gas or a germicide if necessary.
- Stereotaxic instruments perform best at room temperature 70° -75° F (20° -24° C), and at 45-60% humidity.
- **Call for details about calibration service!**

Ultra-Precise Stereotaxic Manipulator Arms

Ultra-Precise Manipulator Arms

Ultra-Precise Manipulator Arms are ideal for use in stereotaxic surgery where high-accuracy positioning is required. Up to 80mm of travel is available in all directions, with up to 90° angle adjustment, in either the anterior-posterior or medial-lateral planes. Ultra-Precise Manipulators are compatible with all Stoelting Stereotaxics including New Standard™, Lab Standard™, and Just for Mouse™.

Ultra-Precise Features:

- 10µm resolution
- Target small brain regions with confidence
- Upgrade ANY Stoelting Stereotaxic and most other stereotaxic brands

Extremely high accuracy...Precision like no other! Contact us for more details.

Digital Stereotaxic Manipulator Arms

Stoelting's Digital Stereotaxic Manipulator Arms

Stoelting's Digital Stereotaxic Manipulator Arms are designed for fast, accurate positioning during stereotaxic surgery. Ideal for inexperienced users, the digital manipulator arms employ an LED module that provides immediate coordinate feedback for repeatable targeting!

- 10µm resolution
- Upgrade or convert your existing Manipulator Arm (see page 13)
- No computer necessary

Stoelting's Digital Stereotaxic Manipulator Arms reduce the risk for human error.

Robotic Stereotaxic Instruments

Neurostar Robotic Stereotaxic Instruments

Stoelting, the leading manufacturer in stereotaxic equipment and Neurostar, the pioneers in robotic stereotaxic solutions for animal research, have teamed up to produce the best robotic stereotaxic systems on the market! The robotic systems are ideal for both new and experienced users.

Features include:

- StereoDrive software (computer not included)
- Atlas integration (Rat or Mouse)
- Motorized movement, computer controlled
- Correction for alignment inaccuracies (tilt correction)
- Correction for variation of brain size
- Auto-calculated angle adjustment
- 1 micron precision

Call Stoelting for dual and additional configurations.

Drill and Microinjection Robot

Drill and Microinjection Robotic System

The Drill and Microinjection Robotic System provides automated drilling followed by an intracranial injection using the same holder! This unique robotic stereotaxic is ideal for multiple injection sites with no tool exchange between the drill and injector.

Microinjection Features Include:

- Integrated into the StereoDrive software (computer not included)
- Define/Store protocols
- Also available as Glass-Capillary Nanoinjector (page 18)
- Atlas integration

Drill Features Include:

- Integrated into the StereoDrive software
- Depth controlled for safe drilling
- Auto stop function – automated dura detection avoids brain damage
- Atlas integration

Drill and Injection Robotic Features include:

- All the above plus **NO TOOL EXCHANGE!**
- Software synchronization of Drill and Microinjector
- High throughput for drill and inject.
- Time saving and accurate.
- Automated sequencing for multiple injection sites – just program it and it does the work!

Compatible
with Stoelting's
Stereotaxic
Instruments!

51707	Drill and Microinjector Robot, Rat
51710	Drill Robot, Mouse
51709	Injection Robot, Mouse
51708	Optogenetics Robot (including drill + injector), Mouse

ACCESSORIES FOR STEREOTAXIC ROBOTS

58632	Smart Remote Control
58633	Automated Synchronization Device for Drill and Injector
51722	Laptop Computer

Glass-Capillary Nanoinjector

The Glass-capillary Nanoinjector was specially designed to perform accurate ultraprecise nanoliter volume injections using glass capillaries that can be pulled to ultrathin tips. Wireless solution available.

In combination with the automated drill it can be used in the Drill and Nanoinjection Robotic configuration.

Features include:

- Computer controlled, intuitive interface
- User defined injection volumes, starting from 1nL
- User defined injection rates, starting from 2nL/s
- Can be mounted on micromanipulators/stereotaxic
- Automated sequencing for multiple injection sites—just program it and it does the work!

CAPILLARY NANOINJECTOR

51712	Capillary Nanoinjection Robot, Mouse	
58646	Capillary Nanoinjector (wireless for micromanipulators)	

Smart BregmaFinder

Breakthrough innovation provides automated camera-driven zero-positioning of the probe over Bregma. The Smart BregmaFinder controls the robotic stereotaxic in order to precisely position the tip of the probe to Bregma.

Features include:

- Easy Bregma Detection
- Camera -Driven Positioning
- Experiment Monitoring
- Video Streaming
- Highest Accuracy

SMART BREGMAFINDER

58635	Smart BregmaFinder

Large Animal Stereotaxic Instruments

Parallel Rail Stereotaxic Instrument

Stoelting's Parallel Rail Stereotaxic Instrument is designed for large animals, but can be used on almost any laboratory animal with Stoelting's selection of animal species adaptors (page 22). Includes Parallel Rail frame; cat/monkey or dog/monkey adaptor; four 100 micron 2-axes manipulator arms (2 right-hand, 2 left-hand); traditional (18°) ear bars; swivel stand; base plate, and four corner-clamp probe holders.

Parallel Rail Features

- Durable 2-axes positioning manipulator arms
- A/P microdrive available for increased resolution
- Adaptable for use with Rats and Mice

Platform base allows for off-table vertical adjustment.

Parallel Rail is the MOST versatile stereotaxic instrument available!

PARALLEL RAIL STEREOTAXIC INSTRUMENT

51800	Parallel Rail Stereotaxic, 2 Manipulator Arms	51800
51804	Manipulator on Rail Clamp, Left	
51806	Manipulator on Rail Clamp, Right	
51858	A/P Microdrive	

Traditional (18°) ear bars included. Non-Puncture (45°) ear bars available upon request.

51800 Parallel Rail Stereotaxic Instrument (shown with optional A/P Microdrive)

Lab Standard with Mouse Adaptor

Position easily and secure your animal gently

Stoelting's Mouse/Neonates Adaptor is designed for use with the traditional 'U' frame Stereotaxic instrument. It employs lightweight Delrin Ear Bars with tapered points on one end, and rubber tips on the other, to facilitate surgery on mice and rat pups.

The NEW Stoelting Mouse Adaptor Kit (page 23) uses a more traditional low profile hold for the head and snout of the mouse. Non-Rupture (45°) Ear Bars are included. The 51625-1 Elevated Platform with warming pad is ideal for this adaptor.

LAB STANDARD WITH MOUSE & RAT ADAPTORS

51615	Digital Lab Standard with Mouse & Neonates Adaptor
51615T	Lab Standard Stereotaxic, Mouse
51925	Digital Lab Standard with Mouse & Neonates Adaptor
51925T	Digital Lab Standard Stereotaxic, Mouse
51625-1	Elevated Platform for Mouse with Warming Pad
51625W	Mouse & Neonates Adaptor with Warming Pad

Add a **Rodent Warmer** Control Box to **utilize your Adaptors' warming feature!** See Rodent Warmer Control Box options on pages 38-39.

Stereotaxic Animal Adaptors

Transform your stereotaxic frame using our species-specific adaptors!

All adaptors are available for use with Parallel Rail Stereotaxic Instrument!

51660-1 Mouse Adaptor Kit

Mouse Adaptor Kit

The Stoelting 51660-1 Mouse Adaptor Kit includes a nose clamp assembly with small tooth bar for easy placement. Non-Rupture (45°) Ear Bars are included. The 51625-1 Elevated Platform is ideal for this adaptor and has a built-in warming pad.

51660-1 Mouse Adaptor Kit, (45°) Ear Bars

51625-1 Elevated Platform for Mouse Lab Standard

51621 Rat Adaptor

Rat Adaptor Kit

The 51621 Rat Adaptor Kit is included with all Lab Standard™ Stereotaxic Instruments for rats. The nose clamp assembly and either standard Traditional (18°) Ear Bars, or Non-Rupture (45°) Ear Bars are included.

51621 Rat Adaptor, with dual-sided ear bars, (Traditional and Non-Rupture)

51622 Guinea Pig Adaptor

Guinea Pig Adaptor Kit

The Guinea Pig Adaptor includes the Non-Rupture (45°) ear bars required for guinea pigs. Also, the nose clamp reaches further back behind the incisors than on the rat adaptors. Compatible with all Lab Standard™ Stereotaxic Instruments.

51622 Guinea Pig Adaptor, Non-Rupture (45°) Ear Bars

51623 Small Bird Adaptor

Small Bird Adaptor Kit

The Small Bird Adaptor Kit includes Non-Rupture (45°) Ear Bars, a beak support and "V" shaped beak clamp to secure the beak in place.

51623 Small Bird Adaptor, Non-Rupture (45°) Ear Bars

51852 Dog/Monkey Adaptor

Large Animal Adaptor Kits

The Dog/Monkey Adaptor is available only for the 51800 series stereotaxic instruments. Includes one set of Traditional (18°) Ear Bars.

51852 Dog/Monkey Adaptor, Traditional (18°) Ear Bars

51826 Cat/Monkey Adaptor, Traditional (18°) Ear Bars

51678 Marmoset Adaptor Kit for 51600

Marmoset Adaptor

The Marmoset Adaptor holds the marmoset head by means of a vertically adjustable palate bar with infra-orbital bars. The ear bars are Non-Rupture (45°) to prevent rotation of the head.

51678 Marmoset Adaptor, Non-Rupture (45°) Ear Bars

Stereotaxic Animal Adaptors

Mouse & Neonates Adaptor

Stoelting's Mouse/Neonatal Rat Adaptor transforms the Lab Standard™ stereotaxic for rats into an instrument equipped for mouse and rat pup surgeries.

Model organisms with soft skulls, such as the mouse and the neonatal rat, are difficult to secure firmly in a traditional stereotaxic instrument. The stainless steel ear bars used for adult rats are too heavy to provide a secure hold without compressing the sides of the auditory canal into which to insert the ear bars.

Stoelting's Mouse and Neonatal Rat Adaptor employs light, Delrin® ear bars with tapered points on one end, and rubber tips on the other, to facilitate surgery on mice and rat pups. Ear bars' height can also be independently adjusted in height to easily level the skull. Laser engraved scales show the vertical positions of the ear bars. A tooth bar and nose clamp secures the nose.

“Triple point” securing of the animal's head in this adaptor makes it the most versatile mouse adaptor available. Set of two jaw holder cuffs included.

*Ideal for Neonatal Hypothermia Anesthesia

51625 Mouse/Neonatal Adaptor*

51625W Mouse/Neonates Adaptor with Warming Pad

51625-1 Elevated Platform for Mouse Lab Standard with Warming Pad

51625-2 Mouse and Neonates Adaptor with Warming Pad

MOUSE AND NEONATES ADAPTOR

51625	Mouse and Neonates Adaptor
51625W	Mouse and Neonates Adaptor with Warming Pad
51625-1	Elevated Platform for Mouse Lab Standard
51625-2	Microscope Platform for Mouse and Neonates

See ear bar options on page 27.

Stoelting Spinal Cord Surgery Adaptors

Stoelting's Spinal Cord Adaptors utilize the manipulator and base plate of the U-frame stereotaxic instrument, enabling precise spinal preparations. The spinal column is secured by up to four, independent transverse process clamps, as well as a spinous process clamp.

Different sizes for Mouse or Rat!

Spinal Cord Surgery Adaptor Features

- For precise spinal surgery applications

STOELTING SPINAL CORD SURGERY ADAPTORS

51695	Rat Spinal Adaptor
51690	Mouse Spinal Adaptor

Versatile and economical instrument for stabilizing the spinal column.

51695 Rat Spinal Adaptor

Stereotaxic Accessories

Stereotaxic Probe Holders

The 51631 **Corner Clamp** is included in the purchase of every stereotaxic frame or manipulator arm!

Probe Holders

Each Probe Holder has an 11mm square acrylic block, with grooves spaced 1 mm apart.

STANDARD PROBE HOLDERS	
51631	Holder with Corner Clamp
51682	Horizontal Probe Holder, 90° (with Corner Clamp)* *Not Shown
51632	Holder with Side Clamp
51634	Holder with "C" Clamp

The Large Probe Holder is compatible with shaft diameters from 6.5-13 mm (0.5 inch). This will hold Hamilton™ Micro-syringes or Stereotaxic Drills. The Extra-Large Drill Holder holds 51449 Micromotor Drill (see page 28) or 13-26 mm (one inch) shafts.

LARGE PROBE HOLDERS	
51633	Syringe Holder
51630	Drill Holder for 51449
51630L	Drill Holder with LED Light (for 51449)
51630-1	Drill Holder for 51555 (See page 28)
51630-1L	Drill Holder with LED Light (for 51555)

The Microdialysis Probe Holder is customized, at Stoelting, to your specification. The hole may be drilled to fit probes from 1.5 to 6.0 mm. Default size is 1.5mm. Please call or email for details.

51636-1	Cannula Holder, Horizontal
51636-2	Cannula Holder for CMA 7, 11, and 12 Guide

The Double-Head Large Probe Holder has a large "C" gripping component at each end, with the "V" clamp attachment. Dual heads allow a secure hold for two different components. Clamps ¼"-½" (6.4 mm-12.7 mm) diameter.

DOUBLE-HEAD LARGE PROBE HOLDER	
51638	Double-Head Large Probe Holder

Probe and Syringe Holders **designed to use with any Stoelting Stereotaxic Manipulator Arm.**

Cannula Holders hold 3.4 mm Cannula Heads, as manufactured by Plastics One™, for cannula sets, and ALZET® Osmotic Pumps.

Probe Holder Features:

- Allows vertical adjustment
- Mount to right- or left-hand micromanipulator
- Compatible with most brands of stereotaxic manipulators

Gas Anesthesia Masks

Gas Anesthesia Mouse

The Gas Anesthesia Mouse Mask provides for precise and secure positioning of an animal during anesthesia and surgery. The mask provides positioning of the animal head that is perfect, automatic and effortless! 51609M is for use with Mouse Stereotaxic Instruments (pages 10-11) and Mouse/Neonate Adaptor (page 23). 51509M is used with Lab Standard (pages 8-9) and New Standard (page 6-7) Stereotaxics. *We recommend this be used with a gas scavenger device.*

GAS ANESTHESIA/MOUSE

51609M	Gas Anesthesia Mouse Mask (51730 Series & Neonate Adaptors)
51509M	Mouse stereotaxic Gas Anesthesia Mask (51600 and 51500 series)

Gas Anesthesia for Mouse and Rat

Stoelting's Gas Anesthesia Adapter for Mouse and Rat provides an easy solution for gas delivery to a mouse or rat while still holding the animals head firmly for stereotaxic surgery. This items can be used with most mouse and rat adaptors associated with the Stoelting Lab Standard and Stoelting New Standard Stereotaxic Instruments.

We recommend this item be used with a gas scavenger device.

Surgical Drills

Micromotor Drill

Allows for a slender profile and easy hand-grip.

This high-speed, Micromotor Drill (up to 38,000 RPM) is configured for stereotaxic surgery, particularly in soft-skull animals, such as neonatal rats and mice. The compact control includes switches for Power On/Off, Forward or Reverse Rotation, with Manual or Foot Speed Control. Speed can be adjusted from low, to full speed, using the dial on the box; or with the foot pedal. Miniature Carbide Drill Bit Kit included (51448).

51448 Miniature Carbide Burr Drill Bits

Portable Micro Motor Drill

- 0-30,000 RPM
- Lightweight hand piece
- Lithium Ion rechargeable battery
- Drill bits included

The Portable Micro Motor High-Speed Drill is the ideal choice for stereotaxic drills. Equipped with a light-weight hand piece and pocket size control unit, the micro motor drill provides maximum portability for a variety of applications. Control unit features a digital rpm display and dial speed control for easy monitoring as you work. Speed adjustment up to 30,000 RPM. Run time is approximately 5 hours when unit is fully charged. Optional Carrying Case and Nylon Carrying Pouch available online. Miniature Carbide Drill Bit Kit included (51448).

51555 Portable High-Speed MicroMotor Drill

58650 Flexible Shaft Drill

Flexible Shaft Drill

- Reliable performance
- Low vibration and noise
- Hands-free operation

A Lab Standard™ drill for over 25 years. The powerful motor and flexible shaft offer very low vibration and noise for long-term, reliable performance. The motor may be suspended from the optional 58652 Motor Support with Table Clamp. The heavy metal foot pedal allows exact speed control, and does not slide away from your foot. The drill includes motor, foot pedal, 1/2" handpiece with 3/32" collet, standard for dental drill bits, and a wrench for changing the collet. Miniature Carbide Drill Bit Kit included (51448).

FLEXIBLE SHAFT DRILL	
58650	Flexible Shaft Drill

51633	Large Probe Holder*

*Required to mount drill to stereotaxic instrument See page 24

Cordless Rechargeable Micro Drill

- Designed for balance and control
- No special tools required
- Up to 8 hours on a single charge

The Cordless Micro Drill is designed for research applications that require surgical drilling. Made of lightweight aluminum alloy for balance and control, the Micro Drill is powered by a rechargeable 6-volt nickel cadmium battery, and can function for up to 8 hours under normal operating conditions. Speed is 14,400 RPM. Drill comes with a hard plastic case with die-cut foam for convenient storage, a recharger, and 5 carbide steel burs.

See Bone Anchor Screws & Dental Cement on page 48

Quintessential Stereotaxic Injector (QSI™)

Stereotaxic Accessories

Unlimited positioning options

Mounts to all stereotaxic types (universal mount)

NEW DESIGN!

Single body construction

Low profile syringe mount

*Stereotaxic Instrument sold separately

53311 Quintessential Stereotaxic Injector (QSI)™ Single Injection

Stoelting Quintessential Stereotaxic Injector (QSI™) For Infusion and Withdrawal of Pico and Nanoliter Volumes

Stoelting's QSI™ (Quintessential Stereotaxic Injector) is the standard for versatility and control in stereotaxic surgeries. Only the QSI™ Injector enables the researcher to set volumes as small as 1 nanoliter and flow rates from 0.001µl/min to 363µl/min. The QSI™ works with syringes from 0.5µl up to 250µl.

The QSI™ stereotaxic injector allows accurate control of the volume and flow rate of injections without wasting precious fluids in excessively long tubing. The fluid goes directly through a needle on the syringe, mounted directly on most stereotaxic instruments.

Library of Syringes

The QSI™ contains a library of common Hamilton syringes and plunger diameters, so the user may simply scroll the list to select the desired Hamilton syringe. **Because of the Quintessential Stereotaxic Injector's unique design, it can be attached to any micromanipulator and accommodates practically any make of syringe.**

Touch Screen Controller

The touch screen controller is a microprocessor-based controller that facilitates operation with an easy-to-use display. A help menu is included to make infusion and withdrawal easier than ever.

QSI™ Features

- Easy-to-use Touch Screen Control Box
- Control Single or Dual Injections
- Preprogrammed Syringe Specifications
- Out-of-range Warnings

QSI and Manual Stereotaxic Injector

Stoelting Manual Stereotaxic Injector

Stoelting's Manual Stereotaxic Injector provides an economical means of injecting or withdrawing a calibrated volume with simple, precise manual control. The injector has a universal adaptor for all Hamilton syringes, ranging from 0.5 to 250µl sizes and enables a wide range of volumes to be delivered. Includes Holder for mounting to Stereotaxic Instrument.

Manual Injector Features:

- Infusion/Withdrawal of nanoliter volumes
- Mounts directly to stereotaxic frame

STOELTING MANUAL STEREOTAXIC INJECTOR

Microsyringes

Hamilton microsyringes are made in the U.S.A. using state-of-the-art technology and the finest glass. Please visit our website StoeltingCo.com for additional syringes.

Syringes have removable or permanent needles included with either a 22° point (sharp) or no point (blunt). Luer-tip ends have no needle included.

Economical Micro-Volume Syringes

Tight tolerances between the plunger and the barrel. For use with liquids.

NEEDLE INCLUDED	5µL (26G)	10µL (26G)	25µL (22G)	50µL (22G)	100µL (22G)	250µL (22G)	500µL (22G)

Neuros Syringe

Hamilton Neuros™ syringe provides unprecedented functionality for controlled animal injections. An industry first, the Neuros accurately dispenses 50 nL to 100 µL of liquid through an ultrafine blunt point needle that delivers the sample directly into the injection site.

Developed specifically for the neurosciences, the Neuros minimizes injection site damage by increasing needle rigidity and delivering a microvolume of liquid to an exact location.

Benefits of the Neuros Design:

- Needle rigidity improves insertion path accuracy
- Minimal tissue damage reduces injection variability
- Reduced sample loss saves money and materials
- Fine gauge needle creates smaller injection sites
- Compatibility with most infusion pumps and stereotaxic holders means an easy integration into existing processes

NEUROS SYRINGE

53493	0.5 µl Syringe Neuros Model, 32ga., Blunt
53494	1.0 µl Syringe Neuros Model, 32ga., Blunt

Gas Anesthesia

Gas Anesthesia

LINK 7 Complete Active Surgical Gas Anesthesia System

Stoelting's Link 7 Gas Anesthesia System is your all-inclusive anesthesia solution for stereotaxic and general surgery! This easy-to-use, effective small animal anesthesia system includes three anesthesia stations for increased throughput. Excess anesthetic scavenged away by active charcoal canisters also included. Systems available as tabletop or mobile.

Stoelting's Hazard Technology Vacuum Systems

NEW!

Stoelting Dander-Free Animal Clipper System

The Hair and Dander Vacuum attaches to the Animal Clipper so that hair and dander are vacuumed away as soon as they are cut, then collected in a small portable vacuum cleaner. The vacuum cleaner is equipped with a paper bag and a cloth filter backed by a HEPA filter. This combination is 99.97% efficient to 0.3 microns, without excessive filter replacement costs. The exhaust to the room is only clean air.

Features:

- Designed for laboratory animal hair
- Vacuum is HEPA filtered (99.97% at 0.3 microns)
- Built-in noise suppression system
- Safe disposable collection bags
- Swing arm holds hose clear of work area
- Entire system is mounted on a portable cart

options!

Rodent Warmer X1

Use Stoelting's Rodent Warmer before, during and after surgical procedures to improve surgical outcome and overall longevity. Monitor and maintain animal temperature with three programmable settings: animal specific, timer or use with thermal probe. Available with mouse, rat or home-cage heating pad. *Rectal Thermal probe sold separately.*

Features:

- Easy to use dial control
- Preprogrammed animal temperatures
- Use with or without rectal probe (sold separately)
- Lightweight, small footprint

Add a **Rodent Warmer Control Box** to **utilize your Stereotaxic Base's warming feature!**

53850-C Warmer X2 with Cage heating pad and 50304

53850-CC Warmer X2 with two Cage heating pads

53850-M Warmer X2 with Mouse heating pad and 50304

Rodent Warmer X2 with TouchScreen Display

Use Stoelting's Rodent Warmer X2 before, during and after surgical procedures to improve surgical outcome and overall longevity. The integrated touch screen allows for easy programming and controls 2 independent heating pads simultaneously. Available with mouse, rat or home-cage heating pad. *Rectal Thermal probe sold separately.*

Features:

- Integrated touch screen for easy programming
- Controls two independent heating pads simultaneously
- Rectal probe (sold separately) for body temperature feedback
- Available with a combination of mouse, rat or cage size heating pads
- Heating pad included (mouse, rat or home cage)

Cautery

59017

Battery-Operated Cautery

The perfect cauterizing tool, this battery-operated Cautery System provides two operating temperatures: 2200° F and 1300° F (1204° C and 704° C).

The easily replaceable, autoclavable, Nickel-Chrome tips require less power and provide longer battery life. The convenient battery spacer converts the handpiece from high temperature to low temperature. Replacement tips are sold in packs of 10.

BATTERY-POWERED CAUTERY PENS

59017	Battery-Operated Cautery System
59018	Replacement Tips, 5mm (10/box)
59019	Replacement Tips, 10mm (10/box)

59015 has shelf-life due to AAA batteries.

Low-Temperature Cautery Pens

These patented Aaron RAM™ cauteries have an impressive shelf-life and are quite simply the best cauteries ever made. With a variety of low temperatures and fine tips the surgeon is assured of precise pinpoint hemostasis. All disposable cauteries are individually packaged, sterile, 10 per box.

High-Temperature Cautery Pens

High-temperature cauteries are popular for many types of procedures including pinpoint hemostasis, controlling diffuse bleeders, vasectomies, and sculpting woven grafts. Individually packaged, sterile, 10 per box.

LOW-TEMPERATURE CAUTERY PENS

59015	Micro fine tip, 850°F (454°C)
59117	Fine tip, 1300°F (704°C)
59118	Adjustable fine tip, 700°-1200°F (371°-649°C)
59119	Elongated fine tip, 1100°F (593°C)

HIGH-TEMPERATURE CAUTERY PENS

59016	Fine tip 2200°F (1204°C)
59120	Loop tip 2200°F (1204°C)
59123	Adjustable fine tip, 1500-2100°F (816°-1149°C)
59125	Vasectomy tip, 1800°F (982°C)
59126	Fine tip micro, 2000°F (1093°C)
59127	Loop tip micro, 2000°F (1093°C)
59128	Vasectomy tip micro, 1600°F (871°C)

Sutures

Monofilament nylon, braided silk (permanent) sutures, and chromic gut and synthetic absorbable sutures, are now available from Stoelting. Sold in packages of 12, with semicircular (cutting) needles. All suture indicated for use in general soft tissue approximation and/or ligation and ophthalmic surgery. Only nonabsorbable suture indicated for use in cardiovascular and neurological procedures.

NON-ABSORBABLE

PRODUCT	PRODUCT NO.	MATERIAL	LENGTH	SIZE	NEEDLE	PRICE
Monofilament	50480	Nylon	30	4	19.0 mm	\$65.00
	50481	Nylon	30	3	24.0 mm	
	50482	Nylon	30	2	26.0 mm

	50489	Silk-Braided	18	3	24.0 mm	
	50490	Silk-Braided	18	2	26.0 mm	

Nylon exhibits:

- Uniform diameter of the suture
- Maximum flexibility of the strand
- Excellent and consistent knot security
- Minimal Memory

Silk exhibits:

- Smooth flow through tissue while maintaining optimal knot security

Chromic Gut exhibits:

- Purity of collagen for optimal tensile strength and in vivo performance
- Surface smoothness to facilitate knot run-down and knot strength

Visorb PGA exhibits:

- Excellent tensile strength throughout the critical wound-healing period
- Predictable absorption profile (absorption complete between 90-100 days)
- Excellent knot security

Wound Closure

59020 EZ Clip™ Kit, 9mm

EZ Clip™ Wound Closing Kit

Perfect for rapidly closing wounds, providing maximum holding force with minimal trauma. Much easier, and faster to use than the conventional sutures and needles. The Applier works like a staple gun to rapidly apply clips closures. The Applier will hold a single rack of 20, 9mm wound clips, which are held firm and ready to use by a non-rusting beryllium-copper spring. The Applier will provide maximum holding force with minimal trauma. There is no need of assistance to operate the applier or remover. When the wound is healed, clips are easily removed with the Remover. The EZ Clip™ Kit includes the Applier, case of 1,000, 9mm Wound Clips and Remover. *All parts are sold separately.*

Features:

- Autoclavable in the package!
- Smaller “teeth” provide better clamping and wound closure of the animal’s skin
- Racks of 20 clips are individually packed for easy handling
- The clips are pyrogen free and non-sterile
- Designed for use with mice and rats

All components can be ordered separately! See website for details.

Stoelting exclusive packaging of racks of 20 clips in autoclavable polypropylene provides unmatched ease of sterilization and storage.

Reflex Wound Closing Kit–7mm

The 7mm Reflex Wound Closing Kit is ideal for mice and other small animals. Wound clips are pre-filled on a rack ready to be loaded in the 7mm Reflex wound clip applier. The 7mm Reflex Wound Closing Kit includes the Applier, box of 100 7mm Wound Clips, and Remover. All parts are sold separately.

- Easy-to-use
- Designed for use with mice

Surgical Shavers and Trimmers

51465 Cordless Shaver with #40 Blade

Surgical Shaver Kit for Mice and Rats

The Surgical Shaver Kit includes a powerful, cordless blade clipper providing easy mobility around animals. When fully charged, the clippers provide continuous operation for one hour. Kit includes: rechargeable clipper, #40 detachable blade set, charging stand, 2 Ni-MH battery packs, storage case, 4 oz. clipper oil.

Features:

- Rechargeable, cordless
- 15% faster and 10% smaller than comparable models
- Quiet operation

Fiber-Lite® Illuminator

- UL, CE, and C-UL approved for global use
- All Fiber-Lite® Illuminators are backed with a 3-year warranty

Fiber-Lite Illuminators offer high-intensity, cold light illumination when coupled with any of our single or dual fiber optic light guides, which provides a lamp life of over 200 hours at full intensity. Each light guide measures 23 inches (58.4cm) long.

59258 Illuminator, 150W Single Gooseneck

59253 LED Coolight Illuminator

LED Coolight Illuminator

LED Coolight Illuminator has a long-life LED source, and is environmentally and fiscally responsible. It would take 125 replacement bulbs before the LED Coolight hit 75% capacity. Energy use is just one-third of a 150W halogen. LED lights have almost no infrared energy—they are truly a "cool light" source—unlike Halogen lamps that transmit IR heat that can damage a sample or specimen.

FIBER-LITE® ILLUMINATOR

59258	Illuminator, 150W, Single Gooseneck
59259	Illuminator, 150W, Dual Gooseneck
59212	Replacement Bulb

If your main power supply is 220V, add a "V" to the product number.

The Rat Brain in Stereotaxic Coordinates, 7th Edition

Paxinos and Watson

Since its first edition in 1982, the Paxinos and Watson Rat Brain Atlas has become the most trusted source of accurate coordinates and anatomical information in laboratories throughout the world. It has been cited over 60,000 times, making it the most cited publication in neuroscience. The seventh edition incorporates new findings on developmental gene expression and presents the boundaries of neuromeres in sagittal sections.

THE RAT BRAIN

45026	The Rat Brain
45024	The Rat Brain Compact Edition, Spiral-Bound Paperback

Atlas of Prenatal Rat Brain Development

Altman and Bayer

Ten embryonic ages are presented with 20-35 plates each. Plates represent the brain of each age in sagittal and coronal planes. A unique 3-D reconstruction of the brain is presented for each of the ten ages. Computer aided illustrations of brain regions add to the utility of this atlas. A detailed and logical classification of the germinal matrix at early stages is included. 664 pages.

ATLAS OF PRENATAL RAT BRAIN DEVELOPMENT

45036	Atlas of the Prenatal Rat Brain
--------------	---------------------------------

The Mouse Brain in Stereotaxic Coordinates, 5th Edition

Franklin and Paxinos

The only stereotaxic atlas in print to depict the mouse brain. The same painstaking histology procedures as used in The Rat Brain in Stereotaxic Coordinates, by Paxinos and Watson, guarantee high quality and accurate coronal sections. The new edition of the neuroanatomical mouse brain atlas is a must-have for all researchers studying the mouse nervous system. This is a package of the Mouse Brain Atlas plus a digital Ebook version.

Stereotaxic Surgery in the Rat: A Photographic Series

Illustrated Step-by-Step Guide

Cooley and Vanderwolf

Each step of stereotaxic surgery, from anesthetizing the animal to suturing, is clearly described and illustrated. The photos employ the "U"-Frame type stereotaxic instrument (Lab Standard™ 51600) and utilize the skull flat and bregma zero point coordinate system. All aspects of the instrument and the technique are clearly described and illustrated. 100 pages.

51458 Dental Cement Kit

Dental Cement

Dental Cement is used to affix stainless steel to skull or bone, for lab repairs, or for casting of hard acrylic parts. Can be cut, drilled or ground. Sets up in minutes. Kit includes items pictured.

DENTAL CEMENT KIT

51458	Pink Opaque, 1 lb.
51459	Clear, 1 lb.
51456	Extra Solvent, 8 oz

These items are available only to the 48 contiguous states and via ground shipment.

52194

Instrument Cup

An instrument cup designed to arrange surgical instruments in the open position. Made of durable silicone, the instrument cup replaces glass and metal instrument pans, and won't damage delicate instrument tips. Large instruments rest against the bottom and side, while small instruments may be suspended from the scalloped brim. The Instrument Cup has a wide base (5 in/12.7cm) for stability, making it resistant to slippage on table surface.

Stereotaxic Instrument Kit

NEW!

Stoelting's Stereotaxic Instrument Kit

Stoelting's Stereotaxic Surgical Instrument kit contains all the necessary tools for mouse or rat stereotaxic surgeries. You will find precision Stoelting brand surgical instruments including a double sterilizing tray that will fit all the tools. Indeed, this kit also includes the Kane Clamp, exclusive to Stoelting for retracting the skin for optimal view of the skull without causing trauma to the surrounding tissue.

Did you know...

Stoelting supports **more than 40 scientific meetings** every year?

Below is a list of Societies Stoelting has supported for over the past 25+ years!

- Society for Neuroscience
- Society for Behavioral Neuroendocrinology (SBN)
- International Behavioral Neuroscience Society (IBNS)
- NIH Research Festival
- Canada Neuroscience
- Federation of European Neuroscience Societies (FENS)
- AALAS
- Neurotrauma
- International Narcotics Research Conference (INRC)
- Organization for the Study of Sex Difference (OSSD)

Please contact us if you think Stoelting would be a good fit for your conference!

We provide funding to the symposiums, conferences and meetings in sizes ranging from a few hundred, to tens of thousands of scientists. Not many other companies support the life sciences, particularly neuroscience, as much as Stoelting. Please keep that in mind when deciding

where to purchase equipment or supplies. Ask yourself... does this company provide funding and support to the meetings that I attend so that I am able to present my data and interact with other scientists?

Sterilizers and Sterilizing Trays

Hot Glass Bead Dry Sterilizer

- Sterilization time 2-5 seconds
- Small footprint
- Meets new NIH guidelines

Insert the cleaned surgical instrument for 2-5 seconds, and remove. Within 30 seconds, the surgical instruments are cool enough to use. The chassis stays cool, even at the end of a full day of operations. The air above the unit is cool enough to insert an instrument into the well without discomfort. The working end is sterile before the handles get hot. The sterilizer's small size fits conveniently into the back corner of a hood or surgical table. One package of glass beads is included with the instrument.

50287V	Dry Glass Bead Sterilizer, International 220V
50289	Glass Bead Refill, 10 oz. Pkg.

Sentry Digital Ultrasonic Cleaner

The Sentry Ultrasonic Cleaner is a high efficiency cleaner specially developed to clean surgical instruments. Ultrasonic waves pump micron-sized bubbles into the water. These bubbles fit into the tightest spaces that would be impossible to clean by traditional methods. When the bubbles implode, water hits the instrument at speeds up to 250 mph—a very powerful cleaning action.

58620 Ultrasonic Instrument Cleaner

SENTRY DIGITAL ULTRASONIC CLEANER

Plastic Sterilizing Tray

- Tray is safe for all standard methods. Autoclave/dry heat up to 360°F, ETO, and cold solutions.
- Flexibility of layout. Finger-tip mats and “plug-in” inserts for individual instruments.
- Unique “grid” system in all bases, trays, and lids makes it easy to install mats or inserts to protect your instruments.
- Double-level trays to handle different instrument quantities. Double-level trays come with a removable upper-level insert and mat.

Infusion/Withdrawal Syringe Pumps

Stoelting Tabletop (QSI™) Stereotaxic Syringe Pump

We've tabled our classic Quintessential Stereotaxic Injector (QSI™) to provide an even more versatile injector suited for stereotaxic surgeries. Stoelting's Tabletop QSI™ allows for dual simultaneous injections of nl-µl volumes. Program injection parameters (volume, rate, and syringe specifications) using the easy-to-use touch screen control box. Accommodates Hamilton syringes sized 0.5µL-250µL. If you already own a QSI™ add the Tabletop system by simply purchasing the Tabletop Injector Only (53327). If purchased as a single injector, add a second injector at any time.

QSI™ Features

- Easy-to-use Touch Screen Control Box
- Dual, Simultaneous Injections
- Preprogrammed Syringe Specifications
- Out-of-range Warnings

NAME OF PRODUCT

53325	QSI™ Dual Microliter Syringe Pump, Tabletop System
53327	Tabletop Stereotaxic Injector Only

*Syringes NOT included

See page 32 or our website, for a complete selection of available syringes.

Manual Microsyringe Pump

Stoelting's Manual Microsyringe Pump is a convenient instrument when using visual feedback to determine the amount to be infused or withdrawn. It also provides an economical means for any application requiring injecting/withdrawing a calibrated volume under manual control.

Applications Include:

- ICSI microtitration
- Chromatography
- Microinjections

Accessories Included

The Microsyringe Pumps includes one 100 Microliter syringe, 1 female Luer Lock-to-tubing adaptor and 10 ft. of Intramedic® PE polyethylene 60 tubing, .030" I.D., x .048" O.D.

51218	Infusion Pump
51218D	Infusion/Withdrawal, Digital (LCD) Pump

Mcllwain™ Tissue Chopper

The Mcllwain™ Tissue Chopper is a proven instrument for rapidly sectioning living or fixed tissue, without freezing or embedding, to harden the tissue. It cuts living tissue into slices, cubes, arterial rings, etc. with a minimum of functional disturbance.

These preparations can be used in studies of metabolism or for electrophysiology. The Mcllwain™ Tissue Chopper may also be used to cube fixed tissue for araldite embedding and EM.

The specimen is affixed to filter paper or plastic discs (51354) and clipped to the instrument's stainless steel table top (cyanoacrylate adhesive may be used to hold tissue pieces in otherwise unstable positions.) The table moves at a pre-set speed. As it moves, a chopping arm is raised automatically, and chops down at frequencies from zero to 200 strokes per minute. A pre-set stop prevents the attached blade from penetrating the filter paper and

impacting the instrument's stainless steel table. In this way, serial sections of live tissue from 0-1 mm thickness may be cut rapidly.

The thickness is pre-set with a micrometer graduated in 1 micron and 25 micron increments. After sectioning in one plane, the instrument's table may be rotated any number of degrees, and the process repeated, to obtain cubes or prisms.

Includes one pack of blades.

MCILWAIN™ TISSUE CHOPPER

51350	Mcllwain™ Tissue Chopper
51352	Blades, Pkg/10
51354	Plastic Discs, Pkg/10

If your main power supply is 220V, add a "V" to the product number.

Stoelting Tissue Slicer

Fast production of living tissue slices

Originally designed to prepare thin slices of living brain, the tissue slicer is also excellent for slicing other tissues, blocking fixed tissue for histology, and slicing electrophoretic gels. Sections as thin as 150 microns can be reliably prepared. Tissue cutting is done with a standard double-edged razor blade.

51425 Tissue slicer with Vernier micrometer

Two Models

The 51425 Tissue Slicer has a conventional vernier micrometer, resolution 10 microns. The 51415 Digital Tissue Slicer has a digital display electronic micrometer, with 1 micron resolution.

Advantage of the 51415 Digital Tissue Slicer

- Switch from mm to inches
- Set zero at any point
- Set low- and high-tolerance limits
- Features over-travel warning signal and output to a printer, processor, data logger or computer

Reversible Handedness

The tissue slicer can be reversed as to left or right handedness. In use, the tissue is placed on the moistened filter paper and moved beneath the cutting edge. The cutting arm is lifted by its handle. The pin is removed and the arm is released, falling by its own weight (and assisted by the spring) thereby slicing through the tissue at high velocity. The cut tissue slice is removed from the razor blade with a small artist's brush moistened in incubation media. The cutting arm is lifted, the dovetail slide moved for the next slice, and the process repeated.

51415 Tissue slicer with digital micrometer

Rodent Brain Dissection

Rodent Brain Matrices

These matrices are precisely machined and highly polished to ensure reproducible sectioning. Rat and mouse brain matrices are available. Coronal and sagittal sections at 1 mm intervals. All coronal brain matrices have an additional mid-line sagittal cut to aid in the separation of the left and right hemispheres. The mouse brain matrices can also be used on neonatal rat brains. Divisions are 1 mm apart.

Dimensions: 1 Hx1.75 Lx1.125 W in.
(2.54H x 4.45L x 2.86W cm)

Stainless steel, 0.5mm intervals also available! Visit StoeltingCo.com

Brain Punch Set

This Brain Punch Set, with spring-loaded nylon expellers and a convenient handle, facilitates the “Palkovits Punch” technique of dissecting out specific brain nuclei for neurochemistry.

The nuclei are punched from frozen brain sections on glass slides, and expelled into the reagents. Spring-loaded expellers avoid risk of contamination that might be caused by expelling with breath.

Each punch has an electropolished sharp end for smooth cuts and minimal tissue adhesion. The Brain Punch Set includes the following: handle, 0.25, 0.50, 0.75, 1.0, and 1.25 (±5%, slight variation due to electropolish etching to sharpen). Other sizes available. Replacement punches available individually, visit StoeltingCo.com or StoeltingEurope.com.

Other punch sizes available online!

--------------	-----------------

51360
Cervical
Dislocator

Cervical Dislocator

The Cervical Dislocator is a completely humane and efficient means of sacrificing laboratory rodents bloodlessly. Evidence indicates that the brain stem is terminated instantly by a blow from the metal bar.

When used with the plastic restraint cones, the animal can be effectively and safely restrained during transfer between cages or through all necessary handling. The 5 cm opening is sufficient for most laboratory rodents. A 6 cm model is also available.

Decapitator

Stoelting's small animal decapitator has hardened and ground surgical stainless steel blades, aluminum base and stainless steel hardware. With its 1.5" (3.81 cm) square maximum blade opening, it is suitable for decapitating rats, mice and other small animals. The decapitator cuts cleanly and quickly through bone and tissue. The base has four holes for bench mounting.

51330

DECAPITATORS

51330	Small Animal Decapitator

Rat and Mouse Bone Strength Tester

Bone Strength Tester

Each Bone Strength Tester is configured for administration of the three-point bending method yielding biomechanical parameters including force, stiffness and energy necessary for break. Torsion, Tensile Strength, Compression and Wound Breaking techniques can also be performed using optional sensors and accessories. Computer software is included for data acquisition.

Used to analyze bone strength in studies associated with:

- Age-related Bone Loss
- Hormone Replacement Therapy
- Weight-Bearing Exercise
- Vitamin Deficiency

50195-5 Rabbit Ventilator 50ml

Ugo Basile Rodent/ Rabbit Ventilators

Ugo Basile's Rodent/Cat/Rabbit Ventilator is a volume-controlled mechanical ventilator (according to Starling's ventilation method), designed for use with rodents, cats, rabbits and animals of similar size. It consists of a variable speed geared motor linked by a novel variable stroke mechanism to easily interchangeable cylinder/piston assemblies.

Features:

- Interchangeable cylinder/piston assemblies (5, 10, 30, 50 and 100ml)
- Quiet operation, both acoustically and electrically (negligible R.F. broadcasting)
- Reliable mechanics and impeccable finishing: long lasting
- Synchronised START/STOP function available as optional

Ugo Basile Mouse Ventilator

This new Respirator features:

- The tidal volume, in the range 0.1-1 ml (or 0.05-0.5 with the smaller piston installed)
- Ideal for use with mice, small birds and perinatal rats
- Unique design
- Compact
- Reliable
- Silent

for additional information.

Blood Pressure

50370 Muromachi
Blood Pressure Monitor

**The only
non-preheating,
non-invasive Blood
Pressure Monitor
for Mice and Rats**

Blood Pressure Monitor

Non-invasive Blood Pressure Monitor

- Preheating of animals not required
- Use with animals under 10 grams
- Use with C57 BL6 Mice and colored Mice
- Use with Zucker Fatty Rats
- Use with Hamsters (with a leg cuff anesthetic)
- The only monitor that can be used with Guinea Pigs—even without anesthesia
- The only monitor that can be used with OB (diabetic model) Mice

Preheating of animals not required

Provided the room temperature is at least 23°C, the animal's blood pressure can be measured without heating the animal. After photoplethysmographically measuring tail arterial blood pressure, pulses are stored in the computer memory and peak levels of the pulses are plotted on a display.

Easy Operation

- Two operation modes are available—Mode 1: HR (Heart Rate) and SBP (Systolic Blood Pressure) and Mode 2: HR, SBP, MBP (Mean Blood Pressure) and DBP (Diastolic Blood Pressure, calculated value) can be measured.
- Continuous measurement can be performed up to ten (10) times.

- Printout function
- Colored mice such as C57BL/6, neonatal mice, hamsters (anesthetized) and guinea pigs (non-anesthetized) can be measured.
- Sick animals can be measured. (e.g. animal with cardiac infarction)
- Multi-channel system is no longer needed. Just prepare multiple restrainers, and measurement can be done one after the other.
- Auto-Sequence Function blood pressure of a tail artery of an animal can be monitored automatically at specified time intervals, which can be 1-99 minutes in length.
- An RS-232C interface is provided on the rear panel of the main unit. Using the optional Data Collection Software (Windows OS only) the data obtained can be exported to a personal computer and stored as a CSV file.
- The animal holders are made of dark brown acrylic, allowing BP measurement under relatively stress-free conditions.

Included Accessories

Includes built-in high-speed printer, 9" (22.86 cm) display, measuring stand, choice of cuff-pulse sensor, animal holder, and 5 rolls of thermal chart paper.

For PC compatibility, Data Collection Software 50391, sold below, is not required.

BLOOD PRESSURE MONITOR

50370	Muromachi Blood Pressure Monitor
50391	Data Collection Software for Windows

If your main power supply is 220V, add a "V" to the product number.

51324

Mouse Restrainer, Head and Tail Access

These mouse restrainers are built in cylinder-shaped perspex. Lateral slots and holes allow for the animals ventilation and make the access for interperitoneal (i.p.) drug administration possible. The available space for the

animal can be adjusted by means of a sliding piston, thereby keeping the whole tail free for a pulse transducer and cuff positioning or for intravenous (i.v.) drug administration. The animal is led in from the back and can walk out in the front, thus avoiding dragging it backwards.

MOUSE RESTRAINER, HEAD AND TAIL ACCESS

51324	Mouse Restrainer, Head and Tail access, 0-50g
51325	Mouse Restrainer, Head and Tail access, 0-35g
51326	Mouse Restrainer, Head and Tail access, 0-25g

51332

Head Access Rodent Restrainer

Provides access to the head and allows access to food and water. Offered in four sizes to accommodate indicated rodent weights.

HEAD ACCESS RODENT RESTRAINER

51332	Head Access Rodent Restrainer, 15-30g
51339	Head Access Rodent Restrainer, 30-125g
51333	Head Access Rodent Restrainer, 125-250g
51334	Head Access Rodent Restrainer, 250-425g

51328

Rabbit Restrainer

Provides total visibility of the animal, and aids in retaining body warmth. The non-slip floor surface provides better footing and helps to calm the animal. A curved back/butt plate minimizes the possibility of a broken neck.

RABBIT RESTRAINER

51328	Rabbit Restrainer, 0-4 kg
51329	Rabbit Restrainer, 4-7 kg

51338

Tail Access Rodent Restrainer

The head is pushed back by the moveable ring so that the tail projects out the hole in the acrylic plate. Perfect for injections, blood sampling, or blood pressure monitoring. Offered in four sizes to accommodate indicated rodent weight.

TAIL ACCESS RODENT RESTRAINERS

51338	Tail Access Rodent Restrainer, 15-30g
51337	Tail Access Rodent Restrainer, 30-125g
51336	Tail Access Rodent Restrainer, 125-250g
51335	Tail Access Rodent Restrainer, 250-500g

51361

Rodent Restraint Cones

Disposable plastic restraint cones hold the animal safely in position for injections through the plastic bag, for decapitation, for cervical dislocation, or for examination

of collected field specimens such as field mice or rats. The scientist avoids contact with feces or urine, and avoids bites and scratches.

The animal is easily loaded into the cone at the wide end, and heads for the breathing hole at the small end. Sold in packs of 50.

RODENT RESTRAINT CONES

51361	Plastic Restraint Cones, Pk/50

ANY-maze Behavioral Tracking Software

ANY-maze

ANY-maze

Today's most advanced video tracking system

Get a quick insight into the power & simplicity of ANY-maze at ANY-maze.com!

ANY-maze is today's most advanced video tracking system. Trusted by thousands of researchers around the world, ANY-maze couples an unrivalled depth of features with a simple, familiar design, to provide automated testing in virtually any behavioural test.

ANY-MAZE

60000	ANY-maze Software	
-------	-------------------	--

Use literally any maze

Zones: Draw shapes to divide your apparatus into areas, then combine areas to create any number of zones.

Sequences: Define sequences to detect movements between areas or zones.

Immobility and freezing: Automatically detect immobility and freezing, perfect for fear conditioning.

Track with precision

Whole animal: Use whole-animal tracking to precisely detect arm entries.

Three-point tracking: Track the head, centre and base of the tail to provide both location and orientation.

Accuracy: Track accurately, even in poor light or low contrast, without setting any obscure parameters.

ANY-maze Behavioral Tracking Software

Connect to almost anything

Acquire: Use purpose-built ANY-maze interfaces to acquire data from levers, photobeams, sensors, running wheels...

Control: Also control speakers, pellet dispensers, optogenetic lasers, syringe pumps, shockers, lights...

Adjust: Change shock intensity, alter tone frequency, set a laser's duty cycle...even while a test is being performed.

Easily design complex tests

Automate: Use procedures, built from a few easily understood statements, to automate your tests.

Straightforward: Procedures can be simple – for example ending the test if the animal finds a water-maze island.

Sophisticated: Or they can incorporate complex rules for what should happen when, based on the animal's behaviour.

Test	Animal	Stage	Trial	Apparatus	Testing status	Reason ended
1	1	Training	1	Barnes maze 1	Completed	Entered escape hole
2	4	Training	1	Barnes maze 4	Completed	Test duration
3	2	Training	1	Barnes maze 2	Completed	Test duration
4	3	Training	1	Barnes maze 3	Completed	Test duration
5	1	Training	1	Barnes maze 1	Ready	
6	1	Training	1	Barnes maze 2	Ready	
7	1	Training	1	Barnes maze 3	Ready	
8	1	Training	1	Barnes maze 4	Ready	
9	1	Training	1	Barnes maze 1		
10	1	Training	1	Barnes maze 2		
11	1	Training	1	Barnes maze 3		
12	1	Training	1	Barnes maze 4		
1	1	Training	2	Barnes maze 1		
2	1	Training	2	Barnes maze 2		

Follow an intuitive test schedule

Automatic: ANY-maze automatically maintains a schedule showing the status of all the tests in your experiment.

Stages and trials: Break an experiment into multiple stages containing repeated trials – for example, training and probe.

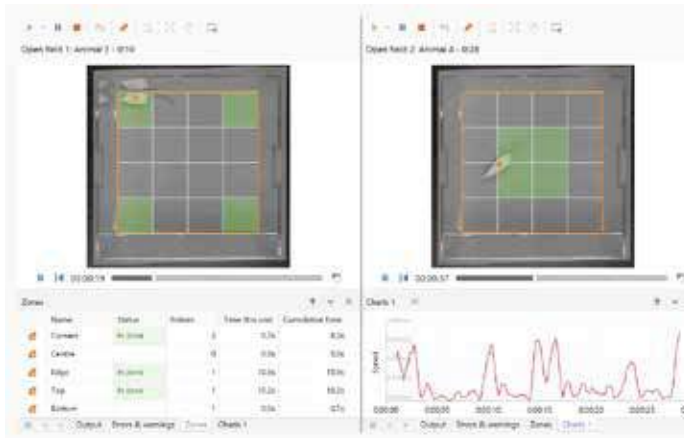

Stay in control: The schedule is flexible-skip tests, retire animals, or just add tests as you go.

Easy to use: ANY-maze is consistently praised for its familiar intuitive design...

ANY-maze Behavioral Tracking Software

ANY-maze

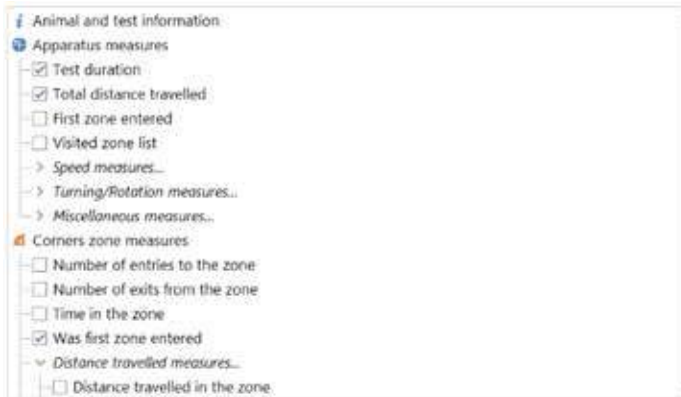

Benefit from flexible testing

High throughput: Increase throughput by running independent tests in up to 40 apparatus simultaneously.

Live data: View live information during tests, such as zone visits or the state of inputs and outputs.

Real-time warnings: Have warnings, such as a dispenser running out of pellets, reported immediately and noted in the test's results.

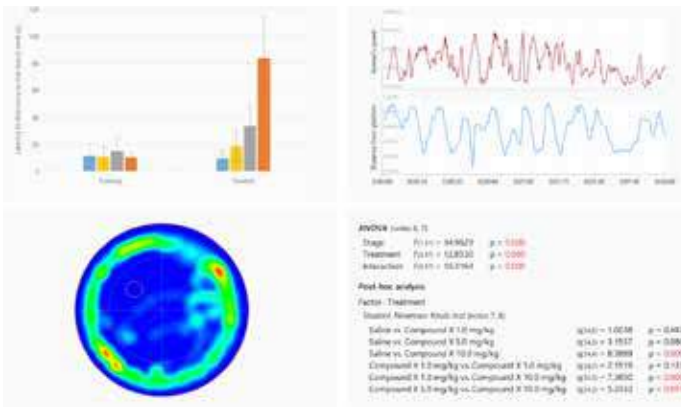

Access hundreds of measures

Extensive: Results are available for the whole apparatus and for each zone, point, sequence, behaviour, input and output.

Per zone: Results are analysed for the entire apparatus and for each defined zone.

Across time: Results are reported for the duration of the test, for equal length time-bins, and for any specific periods.

Visualise & analyse results

Visualise: Visualise test results using track plots, heat maps and charts.

Analyse: Analyse between treatments, strains, genders, trials, etc, using over 30 built-in parametric, non-parametric and post-hoc tests.

Transfer: Copy and save data in a variety of formats for easy transfer to programs such as Excel, SPSS and Statistica.

Test ANY-maze for yourself!

ANY-maze Interfaces

What do you do if you need to count the number of licks at a water bottle, or determine how far an animal runs in an exercise wheel? Video tracking alone can't help. The answer is ANY-maze, the second generation of the popular ANY-maze interface. There are a total of seven ANY-maze devices which between them can detect and respond to inputs from, amongst other things, levers, running wheels, touch switches and nose-poke holes; and can control devices such as optogenetic lasers, shockers, pellet dispensers, cue lights and speakers. All the ANY-maze devices are fully integrated into ANY-maze and connect to the PC via USB, in most cases you don't even need a power cord.

Optogenetic Interface

The ANY-maze Optogenetic interface is designed to independently control up to four optogenetic lasers during behavioural tests performed with ANY-maze. Using the interface, you can either pulse a laser with very high precision at a specific frequency and duty cycle for a set duration, or you can 'play' a series of arbitrary pulses. If your laser supports it, the interface can also dynamically adjust the laser's intensity.

ANY-MAZE OPTOGENETIC INTERFACE

60060

Optogenetic Interface for ANY-maze

Digital interface

The ANY-maze Digital interface is designed to connect ANY-maze to a wide range of equipment typically found in behavioural labs, such as: levers, photobeams, running wheels, some shockers and pellet dispensers, cue lights, etc.

ANY-MAZE DIGITAL INTERFACE

60064

Digital Interface for ANY-maze

Touch Switch Interface

The ANY-maze Touch switch interface is designed to detect when an animal touches something conductive. For example, this might be the animal licking a bottle spout, the animal's paw touching a metal plate on the wall of a cage, or the animal slipping from a grid and its paw touching a metal floor.

ANY-MAZE TOUCH SWITCH INTERFACE

60061

Touch Switch Interface for ANY-maze

Relay interface

The ANY-maze Relay interface has six output ports which can be used to turn things on and off under software control. For example, an output could switch on a shocker, turn on a light or activate a pellet dispenser.

ANY-MAZE RELAY INTERFACE

60063	Relay Interface for ANY-maze
--------------	------------------------------

Analogue Interface

The ANY-maze Analogue interface is designed to connect ANY-maze to devices which output analogue signals, for example a respiratory gas analyser, a blood pressure monitor or an EEG. The interface can also output digital signals, which can, for example, represent the location of the animal in the apparatus.

ANY-MAZE ANALOGUE INTERFACE

60067	Analogue Interface for ANY-maze
--------------	---------------------------------

Audio Interface

The ANY-maze Audio interface has six outputs which can be connected to 4-ohm or 8-ohm speakers. Each output can independently play white noise, tones or a sound file under full software control.

ANY-MAZE AUDIO INTERFACE

60068	Audio Interface for ANY-maze
--------------	------------------------------

Synchronisation Interface

The ANY-maze synchronisation interface is designed to help synchronise tests in ANY-maze with tests in synchronisation systems. It consists of 6 TTL ports, each of which can be configured independently as an input or an output. Used in conjunction with the synchronisation element of the protocol, the interface allows you to output TTL signals when a test starts, when a new frame is captured from the camera and/or when ANY-maze stores the animal's position in its results.

ANY-maze Video Tracking Bundle Options

Your complete solution for small animal behavior testing!

ANY-maze is the most versatile, easy-to-use behavior tracking software available. Purchasing a complete ANY-maze package makes it even easier. Purchase an ANY-maze bundle and you'll receive everything you need for your research. All ANY-maze bundle packages include unlimited software technical support.

Which ANY-maze Bundle is right for you? See page 134 for more ANY-maze Bundle Options!

ANY-maze with Camera and Accessories Bundle

ANY-maze Camera and Accessories Bundle Includes:

(you supply the computer and maze/apparatus)

- ANY-maze License (Software)
- Camera
- Camera Accessories (lens, ceiling-mount & cables)

ANY-maze Cameras & Accessories

ANY-maze

ANY-maze can be paired with a variety of cameras and accessories to help meet, and optimize, your tracking needs. Additionally, if your research requires something unique, such as the ability to track using simultaneous capture from multiple cameras, or to track in complete darkness, we have options and solutions. Below are some of our recommendations, but if you need assistance in selecting a camera or accessories to meet your specific needs please contact us.

USB Camera and Lens

USB Cable

Vari-Focal Lens

Camera Mounting Bracket

Infrared Night Light Illuminator

Wired ANY-maze Remote

USB 3.0 Type-C Cable, Right Angle

USB CAMERA

- 60516** B&W USB 2.0 CMOS Camera (Lens Sold Separately)
- 60536** B&W USB 3.0 CMOS Camera

USB CAMERA LENSES (SOLD SEPARATELY)

- 60535** Vari-Focal Lens (2.8-10mm) for 60516 & 60536
- 60538** IR-Only Lens Filter for 60535

USB CABLES & HUBS

- 60517B** USB 2.0 Male to Mini Cable, 15ft.
- 60518B** Active USB 2.0 Extension Cable, 16ft.
- 60537B** USB 3.0 Type-C Cable, Right Angle, 16 ft.
- 60538B** Active USB 3.0 Extension Cable, 16ft.

COMPUTERS

- 60555** ANY-maze Computer, Desktop
- 60557** ANY-maze Computer, Laptop

ACCESSORIES

- 60545** Universal Camera Mounting Bracket
- 60540** Infrared Night Light Illuminator
- 60057** ANY-maze Wired Remote Control

See more options and details at ANY-maze.com!

ANY-maze Accessories

ANY-maze

ANY-maze photobeam

The ANY-maze photobeams detect when an animal breaks an infrared beam and can be used in a wide variety of situations, such as detecting when an animal passes through a door, detecting nose-pokes, detecting how far down a corridor the animal has travelled.

ANY-MAZE PHOTO-BEAM

60001-21	AMi Photo Beam, 1 set (IR Transmitter & Receiver)
-----------------	--

ANY-maze Photobeam array

The ANY-maze photobeam array provide a 'curtain' of photobeams and is often used to detect when an animal rears. It can also be as a movement detector, which can generate reliable movement 'counts' in circumstances in which video tracking can't be used. Use with the ANY-maze Digital Interface (see page 111). Includes Stand.

ANY-MAZE PHOTOBEAM ARRAY

60001-02	AMi Photo-Beam Array, 40cm
60001-03	AMi Photo-Beam Array, 100cm

ANY-maze animal shocker

The ANY-maze animal shocker administers scrambled shock to 8 independent outputs. The intensity, onset and duration of the shocker are all under software control, so for example, the intensity of the shock could be altered depending on the situation in a test.

ANY-MAZE ANIMAL SHOCKER

60001-51	ANY-maze Programmable Shocker
-----------------	-------------------------------

See more options at ANY-maze.com!

ANY-maze Animal Scale

Based on settings you specify in the protocol, ANY-maze will prompt you to place an animal on the scales before a test; when you do this, it will weigh the animal and record the result. ANY-maze can also optionally calculate an animal's treatment dose based on its weight.

ANY-MAZE ANIMAL SCALE

60052	ANY-maze Animal Scale
-------	-----------------------

ANY-maze Cue lights

The ANY-maze Cue lights are perfect for providing visible cues to animals during tests. The lights are water resistant and are available in a variety of colors and sizes (22mm, white shown here). Use with the ANY-maze Digital Interface (see page 111).

ANY-MAZE CUE LIGHTS

60045	ANY-maze Cue lights
-------	---------------------

More colors and options available online!

ANY-maze Rotary encoder

The ANY-maze Rotary encoder detects rotations on an axle. This can be useful in a variety of situations. For example, if the axle has a running wheel mounted on it, the encoder will detect rotations of the wheel; or, if the axle connects to an animal tether, the encoder will detect rotations of the animal. Use with the ANY-maze Digital Interface (see page 111).

ANY-MAZE ROTARY ENCODER

60048	ANY-maze Rotary Encoder
-------	-------------------------

ANY-maze Infrared illuminator

The ANY-maze infrared illuminator allows you to track in very low light or even total darkness.

ANY-MAZE INFRARED ILLUMINATOR

60540	ANY-maze Infrared illuminator
-------	-------------------------------

Can be wall or ceiling mounted.

ANY-box for Mice and Rats

ANY-box Multi-Configuration Behavior Apparatus

ANY-box ANY-maze Driven Multiple Tests with a Single Base

ANY-box is a multi-configuration behavior apparatus designed to automate a range of standard behavioral tests in mice and rats. ANY-box uses the same basic components in different tests, creating a flexible and affordable solution for behavior analysis. Mouse and Rat complete automated systems include everything you need for automated assessment of:

- Memory
- Locomotor Activity
- Anxiety
- Drug Effects
- Exploratory Activity
- Stress Response

TESTS INCLUDE:

- Open Field
- Hole Board
- Novel Object Recognition
- Light/Dark Box
- Conditioned Place Preference

Individual Automated Tests also available. Each individual automated system includes:

- ANY-box Software
- ANY-maze Interface
- Universal Base Plate
- Camera & Camera Accessories
- Enclosure of your choice: Open Field, Light/Dark, Conditioned Place Preference, Object Recognition, Hole Board or all 5 tests together!

ANY-box uses the ANY-maze software and camera to track X- and Y- movements. A photobeam IR array is included to track Z- movements (i.e., rearing behavior) which is incorporated into the software.

Automate
up to five
behavior tests!
Computer not
included.

ANY-box Base
(Includes camera and IR Array)

ANY-box for Mice and Rats

62075 Automated Object Recognition, Mouse

62055 Automated Hole Board, Mouse

*Hole Board not available for Rat.
Rat configurations will differ from the products pictured.

64000 Automated Conditioned Place Preference, Mouse

63000 Automated Light/Dark Box, Mouse

Multiple cage systems available.
Call for details.

ANY-box

65000 ANY-box 5-Behavior Test System, 40cm, Mouse

COMPLETE AUTOMATED SYSTEMS FOR MOUSE

62000 ANY-box Open Field, 40cm, Clear w/Photobeam Array

62075 ANY-box Novel Object Recognition, 40cm, Clear w/Photobeam Array

63000 ANY-box Light/Dark, 40cm, w/Photobeam Array

64000 ANY-box Conditioned Place Preference, 40cm, w/Photobeam Array

ANY-box MOUSE ENCLOSURES ONLY (40CM)

60111 Open Field, Clear, Mouse

60122 Open Field, IR Transparent Black, Mouse

62020 Object Recognition, Mouse

62025 Hole Board, Mouse

63100 Light/Dark Box, Mouse

64100 Conditioned Place Preference, Mouse

ANY-box RAT ENCLOSURES ONLY (100CM)

60220 ANY-box Open Field, Enclosure Only, 100cm, Clear

60223 ANY-box Open Field, Enclosure Only, 100cm, IR Black

60221 ANY-box Open Field, Enclosure Only, 100cm, Opaque

63201 Light/Dark Box, Enclosure Only, Rat (set of 2)

64201 Conditioned Place Preference, Enclosure Only, Rat (set of 2)

65201 Object Recognition, Enclosure Only, Rat

Rat and Mouse Behavior Mazes

60135
Morris Water Maze

Water Maze

The Morris Water Maze is one of the most widely used methods in behavioral neuroscience to assess spatial and learning memory. The Water Maze tank is filled with water and equipped with a platform (60030) which acts as a means of escape for animals. During testing, animals learn the location of the platform using spatial cues. The Water Maze tank is made of aluminum and is available in three different sizes for testing of Mice, Rats or both. Platform (60030) is included.

WATER MAZE

60135	Water Maze, Mouse, 3.5-4.5 ft Diameter (1.07-1.37m)
60136	Water Maze, Mouse/Rat, 4.5-5.5 ft Diameter (1.37-1.68m)
60235	Water Maze, Rat, 5.5-6.5 ft Diameter (1.68-2.0m)

AVAILABLE ISLANDS

60030	4 in (10.2 cm) Diameter/12 in (30.5cm) Height
60035	4 in (10.2 cm) Diameter/20 in (50.8cm) Height

Barnes Maze

The Barnes Maze is designed for testing spatial learning and memory. Within the maze, animals are motivated to escape from the brightly lit, open platform to a small dark recessed chamber (escape box). During testing, the animal learns the spatial location of the escape box. The maze also includes false escape boxes, which help to remove visual cues that might be observed from a distance or through an open hole.

60170 Barnes Maze

CATALOG NUMBER		TABLE DIA.	HOLE DIA.	HEIGHT	PRICE
60170	Barnes Maze, Mouse	91cm	5cm	90cm	
60270	Barnes Maze, Rat	122cm	10cm	90cm	

Save money when purchasing an ANY-maze bundle!

Maze bundle packages include: Laptop computer, USB Camera, Camera Accessories, ANY-maze software and a Stoelting maze of your choice! See page 131 for more details.

Rat and Mouse Behavior Mazes

Open arms are equipped with height-adjustable lip to minimize falls.

Elevated Plus-Maze

The Elevated Plus-Maze is used to assess anxiety in rodents. The maze exploits the conflict between the innate fear that rodents have of open areas, versus their desire to explore novel environments. The Elevated Plus-Maze is designed with an elevated plus-shaped platform, with two closed arms and two open. Both open arms are equipped with height-adjustable lip to minimize falls.

CATALOG NUMBER		LANE WIDTH	ARM LENGTH	WALL HEIGHT	LEG HEIGHT	PRICE
60140	Plus-Maze, Mouse	5cm	35cm	15cm	40cm	
60240	Plus-Maze, Rat	10cm	50cm	40cm	40cm	

Elevated Zero-Maze

The Elevated Zero-Maze is a modification of the Elevated Plus-Maze, which incorporates both traditional and novel ethological measures, in the analysis of anxiety. The design comprises an elevated circular platform, with two opposite enclosed quadrants, and two open. This removes any ambiguity in interpretation of time spent on the central square of the traditional "plus" design, and allows uninterrupted exploration.

Includes adjustable rim similar to the elevated Plus-Maze.

CATALOG NUMBER		DIA.	LANE WIDTH	WALL HEIGHT	LEG HEIGHT	PRICE
60190	Zero-Maze, Mouse	50cm	5cm	15cm	40cm	
60290	Zero-Maze, Rat	100cm	10cm	30cm	40cm	

Rat and Mouse Behavior Mazes

60150 Radial 8-Arm Maze

Radial-Arm Maze

The Radial-Arm Maze has been used extensively in evaluating spatial learning and memory. The apparatus consists of eight (or 12) equidistantly-spaced arms radiating from a small, circular central platform. The design ensures that, after checking for food at the end of each arm, the rodent is forced to return to the central platform before making another choice. The subject always has eight (or 12) possible options.

CATALOG NUMBER	LANE	ARM	WALL	PRICE	
60150	8-Arm Radial Maze, Mouse	5cm	35cm	9cm	
60250	8-Arm Radial Maze, Rat	10cm	50cm	13cm	

T-Maze

The T-Maze is used largely in preference and spatial learning tasks. Animals learn to alternate between arms, based on their memory of the previously visited arms, or choose an arm based on the reward presented. The simple, capital T-shape design incorporates a single choice point with only two alternatives.

60181 T-Maze

Mazes for all your behavior testing needs!

CATALOG NUMBER	LANE	STEM	ARM	ARM	PRICE	
60181	T-Maze, Mouse	5CM	35CM	10CM	28CM	
60281	T-Maze, Rat	10CM	50CM	20CM	40CM	

Y-Maze

The Y-maze is used to assess exploratory behavior and/or spatial recognition of rodents. Three identical, equidistant arms, designed with gradual turns, promote exploration of the apparatus. Barrier blocks (optional) can be used to employ recognition or reversal paradigms.

Parallel Rod Floor Apparatus

 ANY-maze Driven

Stoelting's Parallel Rod Foot Fault Apparatus is designed for assessing the effects of drugs, brain damage and disease on motor coordination and fatigue. Tests in up to 16 cages can be performed simultaneously using ANY-maze. This high throughput design makes the test an extremely versatile and valuable screening and phenotyping tool.

Parallel rod Features:

- Easier to use than Rota-Rod
- Provides similar measurements to Rota-Rod testing
- Provides two measurements not necessarily provided by other tests: Number of errors (foot slips) Horizontal distance traveled (cm)
- ANY-maze Parallel Rod Software Included!

Using the ratio errors per cm traveled to index ataxia provides a robust and unique measure of genetic contributions to locomotor incoordination.

**Comparing to Rota-Rod.
Use to assess Ataxia and Motor Coordination.**

61000 Parallel-Rod Floor Apparatus

**ANY-maze Touch Interface included!
See page 111**

PARALLEL-ROD FLOOR APPARATUS

61000	Parallel-Rod Floor Apparatus, Single Enclosure System
--------------	---

67101 Stoelting Lickometer, water bottle mount

Stoelting Lickometer

The Stoelting Lickometer for Mouse can be used to measure licking/drinking behavior in mice. An electrical signal is generated from the tongue touching the sipper tube so each lick by the mouse is a recorded event. The Stoelting Lickometer includes the Plexiglas cage and base, controller, and software. This is designed to work with the ANY-maze software, so a computer is required (not included). This Lickometer is designed to be a low-cost measurement of licking/drinking behaviors in mice.

- Easy to use
- Can be combined with other behavior apparatuses, such as Open Field, Y-maze, etc.
- Easy to clean apparatus

Rat and Mouse Behavior Mazes

60450 Sociability Cage

Sociability Apparatus

Ideal for the investigation of:

- Autism
- Maternal Behavior
- Dominance
- Social Memory
- Sociability

The Sociability Apparatus is used to assess social interaction and conditions thereof. The three-chambered apparatus includes two gray “stranger” enclosures with wide grid bars to promote interaction, and a non-reflective gray floor to maximize contrast, for video tracking purposes.

Rat sizes available.

SOCIABILITY APPARATUS

60450	Sociability Cage, Mouse
60449XL	Sociability Cage, Rat

66000 Repeated Acquisition and Performance Chamber

Repeated Acquisition and Performance Chamber (RAPC)

RAPC is a behavioral monitoring apparatus designed to completely automate and assess spatial learning and memory. RAPC enhances the accuracy of recording temporal measurements, and error scoring, during spatial learning and memory experiments, through the use of the ANY-maze data acquisition software and electronic sensors. In fact RAPC is an ANY-maze software driven product. The software can be used to track as many as 16 chambers simultaneously, and performs full statistical analysis of results immediately upon completion of the experiment.

- Automated data collection results in high throughput and data collection accuracy
- Acrylic construction allows for easy animal observation
- ANY-maze Software control provides ease of operation
- A single personal computer can collect data from up to 16 chambers simultaneously
- ANY-maze software automatically configures the experiments
- ANY-maze controls the experiment flow, data collection and statistical analysis
- The chamber is equipped with two Mylar speakers to generate white noise or provide auditory cues

Rat and Mouse Behavior Mazes

60160 Porsolt
"Forced Swim" Test

Porsolt "Forced Swim" Test

The Porsolt "Forced Swim" Test is commonly used as a test for depression in rodents. Rodents are subjected to forced swim with no means of escape. The animals learn that escape is impossible and become immobile, moving only to keep their heads above water. Increased immobility is interpreted as depression. The Porsolt cylinder accommodates top-down and side camera positioning for automated detection of immobility behavior with ANY-maze video tracking software.

- Designed for use with Rats and Mice
- Center drain
- Valve for water level adjustment
- Handles for convenient carrying, positioning, emptying and cleaning

CATALOG NUMBER	DIA.	DEPTH	PRICE
60160 Porsolt (Forced Swim) Test	20cm	45cm	

Tail-Suspension Test

- Designed specifically for use with ANY-maze
- Suitable for use with Rats and Mice
- Convenient, removable walls for easy cleaning

The Tail-Suspension Test is akin to the Forced Swim Test, but avoids the problems of hypothermia, and stress associated with forced swimming. Animals are suspended by their tails, and the amount of "immobility" is measured. Longer periods of immobility are associated with higher depressive scores, and immobility can be reversed with antidepressant treatment.

60125 Tail-Suspension Test

Mouse Behavior Mazes

Behavior Mazes

63101 Light/Dark Box
7x7 cm Doorway

Light/Dark Box

The Light/Dark Box is a characteristic tool used in the assessment of anxiety. The basic measure is the animal's preference for dark, enclosed places over bright, exposed places. Time spent in the lit (light) half of the arena, and the related exploratory behaviors, are reliable parameters for assessing anxiolytic effects that may be useful in identifying and/or screening of anxiolytic and anxiogenic agents.

CATALOG NUMBER	OVERALL WIDTH	HEIGHT	TEST CHAMBER DIMENSION	PRICE
63101 LIGHT/DARK BOX, MOUSE	40cm	35cm	20x40cm	

Conditioned Place-Preference Apparatus

The Conditioned Place-Preference (CPP) Apparatus is commonly used in the assessment of the rewarding or aversive properties of drugs or to identify the neuronal basis of reinforcement expression. Typically, the test involves association of an environment with drug effects, followed by the association of a different environment without the administration of drugs. Stoelting's Conditioned Place-Preference Apparatus is comprised of two chambers, barrier block and context kit for altering the environment of each chamber.

64101 Conditioned Place-Preference Apparatus

62015 Hole-Board Test

Hole-Board Test

Head dipping on a Hole-Board is frequently used as an indicator of exploratory tendencies in rodent studies. Exploratory behavior in the Hole-Board Apparatus is a highly sensitive measure commonly used to explore and determine pharmacological and genetic influences. Additionally, the holes of the Hole-Board Apparatus can be baited, so the test can be utilized in spatial learning and memory experiments.

Novel Object Recognition Test

The Novel Object Recognition Test is based on the premise that rodents will explore a novel object, more than a familiar one, if the animal is able to remember the familiar one. The flexibility of the Novel Object Recognition Test allows for testing of short- or long-term memory, and can be used to selectively test the effects of an acute drug treatment on a specific stage of memory formation.

62017 Novel Object Test

Open Field Maze with Backlighting

NEW!

Open Field Apparatus with Backlighting

Stoelting's Backlit base is ideal for video tracking using the ANY-maze Software. The three different light levels, Low- 353 Lux, Medium-1156 Lux, and High-2770 Lux allow for better overall tracking of the body with head tracking behavior being greatly enhanced. Back lighting creates a near perfect contrast between the base and the animal.

Features:

- Perfect for tracking multi-colored animals
- Improves contrast for video tracking
- Three different light levels
- 40cm x 40cm space
- Ideal for Novel Object Recognition testing
- Red light conditions available

Rat Behavior Mazes

Conditioned Place-Preference Apparatus

The Conditioned Place-Preference (CPP) Apparatus is used in a wide variety of behavior paradigms. Most commonly it is used in the assessment of the rewarding property of drugs (or other natural reinforcers) or to identify the neuronal basis of reinforcement expression. Typically, a drug is injected, and the animal is placed in a test chamber with distinctive environmental cues.

Each test apparatus includes a 100cm base plate, two sets of place-preference enclosures used for testing two rats simultaneously, barrier block and context kit for altering the environment of each chamber.

Includes two test enclosures for testing two rats simultaneously!

60185 Sleep Disrupter Water Tank for Mice

Stoelting Sleep Disruptor Cage

Stoelting has developed a useful tool for the study of sleeping disorders, REM sleep, and neurodegenerative diseases in mice. The Stoelting Sleep Disruptor Cage produces a stressful environment by utilizing a water environment with 12 individual columns that are just above the water (30mm in diameter), just large enough for a mouse to sit on. But when the mouse goes into REM sleep, the mouse falls into the water. This cage can be used with the ANY-maze Behavioral Tracking Software for video recording and manually scoring other types of behavior.

The following features are available:

- Food hopper and water bottle for studies greater than 24 hours
- Draining valve
- No mechanical parts that can break
- Easy to clean

A new maze and animal model for exploring autonomic reflexes.

SLEEP DISRUPTOR CAGE

60185	Sleep Disrupter Water Tank, Mice
--------------	----------------------------------

McCulloch Rat Diving Tank

The McCulloch Diving Tank Maze can be used for measuring autonomic reflexes seen in rats. In response to submersion under water, the reflexly-induced response consists of apnea, bradycardia and an alteration of blood flow that maintains flow to the heart, brain and exercising muscles while limiting flow to viscera and non-exercising muscles.

60139 McCulloch Diving Tank Maze

Orofacial Pain Assessment Device

Orofacial Pain Assessment Device (OPAD) for Rats and Mice

The Stoelting OroFacial Pain Assessment Device (OPAD) provides an automated measurement of orofacial pain assessment in the trigeminal nerve in rats and mice via hot or cold or mechanical stimulation. Using an operant behavior conflict paradigm, rodents voluntarily (cognitive-based) decide between receiving a reward or avoiding an aversive stimulus to the orofacial region.

The OPAD begins to work when the animal touches and presses between dual Peltier-controlled temperature elements or mechanical protrusions to obtain a liquid reward. As the temperature (hot or cold) becomes aversive, the animal can withdraw. As for mechanical assessment, the animal's orofacial region will be forced to touch the protrusions to proceed to the liquid reward. The ANY-maze OroFacial Software will automatically track the number of licks, contact with elements (both the Peltier and mechanical protrusions).

Features:

- Hot or Cold Temperature Control
- Mechanical Stimulation
- Objective Pain Assessment—Easy to use!
- Operant Testing and Measures (not reflexive based)
- High Throughput
- Rackable System
- Up to 16 Cages with a Single Computer
- 4° to 75°C Temperature Range
- Easy to Clean
- Easy USB Connection
- Designed for use with Mice and Rats

Hardware

The OPAD cage for either mice or rats is seated on a metal base that is easily cleaned. A metal rack for rats and mice are enclosed; easily removed and cleaned between animals. Animals are trained and tested in the cage; the reward bottle is positioned to allow access when simultaneously contacting the thermode or mechanical protrusions with its orofacial region. The water bottle is connected to the data acquisition controller for recording each lick, in addition, contact with the thermode or mechanical protrusions will record each touch and duration. Each cage is easily attached to computer via USB port.

67500 Orofacial Pain Assessment Device (OPAD)

A New Tool for Hot, Cold or Mechanical Pain Assessment in Rats and Mice. All in a Single Instrument!

Software

All of this data taken from the hardware will then be displayed and analyzed using the ANY-maze OroFacial Software. The software is used to set-up a protocol and will then display and track in real-time the following events: temperature changes and contacts with the thermode or mechanical device. Following completion of the test, the OroFacial Software will display graphs and statistical analysis of the experiment(s); of course data can be downloaded to other software programs.

Call or email us to schedule a demonstration!

A new tool for optokinetic testing in rodents.

OptoDrum: Automated Measurement of the Optomotor Reflex

The OptoDrum experience is fully automated. Place a mouse on the platform inside the arena, and the OptoDrum will present slowly rotating stripe patterns to the animal. The animal's behavior is monitored by a camera

and OptoDrum software determines if the animal follows the stripe pattern with its head movement. The stripe pattern will be adjusted over time until the animal no longer shows the reflex-driven behavior. The OptoDrum is incredibly easy to use, right out of the box.

Features:

- Automated detection of gaze direction with freely moving animals
- Automated adjustment of stimulus pattern
- Automated behavioral analysis

ANY-maze Bundles

ANY-maze Tracking Bundle Options

Your complete solution for behavior testing!

ANY-maze is the most versatile, easy-to-use behavior tracking software available. Purchasing a complete ANY-maze package makes it even easier. Purchase an ANY-maze bundle and you'll receive everything you need for your research.

ANY-maze Tracking Bundle Includes:

(you supply the computer and maze/apparatus)

- ANY-maze License
- Camera
- Camera Accessories (lens, mount, cables)

ANY-maze Computer and Accessories Bundle

(you supply the maze/apparatus)

- ANY-maze License
- Computer (Desk or Laptop)
- Camera
- Camera Accessories (lens, mount, cables)

Maze/Apparatus Bundles include everything you need:

- ANY-maze License • Computer (Desk or Laptop)
- Camera • Camera Accessories (lens, mount, cables) • Stoelting Maze/Apparatus of your choice

Ugo Basile Thermal Gradient Ring

Introducing the Ugo Basile Thermal Gradient Ring (TGR) for mice, a novel device for the analysis of comprehensive thermal preference phenotyping. The TGR consists of a circular track that creates a temperature gradient between two set temperature extremes. The mouse is able to freely move across each zone while ANY-maze records and analyzes the preference behavior.

Main Features

- Thermal Insulated Aluminum Ring (runway ID 45cm, OD 57cm)
- Two heating devices to establish symmetric gradient
- Circular design guarantees bias-free, reproducible data—no spatial cues or border effects
- Creates 12 zones per side ($\Delta \approx 2.3^\circ\text{C}$ between each zone)
- Includes USB camera and set of 4 dual (visible/I.R.) lights
- Thermal Gradient Ring Mode in ANY-maze for easy protocol set up

Video recording and analysis is performed through ANY-maze Video Tracking Software. The TGR simply connects to your computer via USB. The temperature of all 12 zones is monitored in real time through ANY-maze by the 4 thermocouples embedded in the TGR. Data output includes: preference temperature, time spent in each zone, and percent of time spent above the given temperature and so much more!

NEW FEATURES!

Ugo Basile Combination Hot/Cold Plate Analgesia Instrument

The Ugo Basile Hot/Cold Plate is used to test thermal pain response in mice and rats. Two working modes allow for testing at a fixed or increasing/decreasing temperature (RAMP). All settings programmed with the easy to use touch screen controller.

Features:

- OPERATING TEMPERATURE: -5.0°C to 65.0°C
- OPERATING MODES: fixed or ramping temperature
- NEW Software on the touch screen unit
- DATA PORTABILITY: via the USB Memory-key (included)
- A NEW keyboard to score endpoints or behavior
- Silent operation

55075 Combination Hot/Cold Plate Analgesia Instrument

COMBINATION HOT/COLD PLATE ANALGESIA INSTRUMENT

55075	Combination Hot/Cold Plate Analgesia Instrument

55200	Ugo Basile Thermal Preference

Can be used as hot plate or cold plate

Reduces operator bias, optimizes repeatability, and saves time

NEW!

The Ugo Basile Incapacitance Tester is here!

Measures the weight distribution difference between an injured and unaffected hind paw of a mouse or rat. For the assessment of spontaneous pain in osteoarthritis, bone cancer, nerve injury and post-operative pain studies. Automatic operation reduces operator bias, optimizes repeatability, and saves time. Easy to set up. Data visualization to monitor trends. Fast and easy cleaning procedures.

Features:

- Automation of the measurement process using AutoStart, a unique feature that identifies immobility windows to optimize test repeatability and save operator time
- Option to switch to manual mode with the included foot pedal for hands free operation.
- Quick calibration of high quality, precision force sensors (0.1g resolution) using the reference weight supplied.
- Quick, seamless management of settings and data using large, bright, color touch screen.
- Recorded parameters include average paw weight, Standard Deviation, and more.
- Easy transfer of data using supplied USB key.
- No screws or protruding parts that can cause interference with the rodents and possibly compromise experiment results.
- Fast cleaning of foot pads (within seconds) because they are conveniently attached magnetically for easy removal.

UGO BASILE INCAPACITANCE TESTER

54785	Ugo Basile Incapacitance Tester, Rat and Mouse
54783	Ugo Basile Incapacitance Tester, Mouse

55370
Plantar Analgesia Instrument

Ugo Basile Thermal Plantar (Hargreaves) Apparatus

Measures paw sensitivity to heat stimulation

In the late '80s Dr. Hargreaves invented a method to assess thermal pain sensation in unrestrained rodents by stimulating the single hind paw and thus allowing for unilateral/contralateral experiments. Ugo Basile made a science-grade instrument to perform this stimulation and automatically measure response, it became a gold-standard with more than 2,000 publications.

Features:

The Ugo Basile is the only available system which detects paw withdrawal latency automatically (or optionally manually), thanks to a light detector embedded in the control unit. It comes complete with:

- Emitter/Detector unit with strong and focused infra-red light source invisible to the animal
- Cross line engraved on the top of the emitter to ease the paw targeting
- Touch-screen electronic unit to set all parameters (light intensity, thresholds, etc.)
- Data export of the USB stick data into .CSV file for easy analysis in Excel
- Platform with semi-transparent glass panel
- Animal enclosures for up to 12 mice and 6 rats, fully modular included
- PC software included for data transfer

Use Durham Animal Restrainers for orofacial stimulation.

57102 Durham Animal Restraint

Ugo Basile von Frey™ Plantar Aesthesiometer

For assessment of animal sensitivity to mechanical touch on the paw

- Computer compatibility—direct connection to a PC
- Readout multifunction graphic display
- Memory stick included for data reporting and portability

The Ugo Basile Dynamic Aesthesiometer is a microprocessor-controlled unit. The experimental data, stored in its internal memory, can be directly exported to the PC via a USB or serial port. The 57820 is provided with a USB memory key, and dedicated software to record all the experimental data of one or more sessions, and to program the experiment layouts from a remote PC.

57820 Ugo Dynamic Plantar Aesthesiometer

UGO BASILE DYNAMIC PLANTAR AESTHESIOMETER

57820

Ugo Basile Dynamic Plantar Aesthesiometer, for Rats and Mice

Ugo Basile Electronic von Frey™

The Ugo Basile Electronic von Frey Instrument provides automated assessment of threshold to mechanical stimuli in mice and rats. Mechanical allodynia and hypersensitivity is assessed by stimulating the plantar surface of the animal's hindpaw and latency to paw withdrawal is recorded automatically.

Instrument includes an electronic unit, touch stimulator and software used to compare applied force with desired target force. Optional base assembly includes perforated metal base, with stand, and multi-configuration animal enclosures.

Base Assembly for Plantar Stimulation

58500 Ugo Basile PAM Meter, Mouse and Rat

Pressure Application Measurement (PAM)

The Pressure Application Measurement (PAM) device is a novel, easy-to-use tool for measuring mechanical pain threshold in experimental joint hypersensitivity models in rodents. The PAM device has been designed and validated specifically for the mechanical stimulation and assessment of joint pain, ideal for detecting arthritis in rats and mice.

Grip Strength, Pain & Inflammation

Ugo Basile Tail-Flick Analgesia Instrument

The Ugo Basile Tail Flick Instrument is used to automatically assess thermal nociceptive threshold in mice and rats. An infrared heat stimulus is focused on the animal tail and reaction time (time to flick) is automatically recorded. An optional Tilted Mouse Restrainer (57369) is necessary to keep the mouse tail on the emitter until stimulated.

Ugo Basile Rota-Rod

Ugo Basile Rota-Rod

Ugo Basile designed the first Rota Rod in the 1960s and with thousands of scientific references, is considered the industry leader in Rota Rod technology. The next generation Rota Rod from Ugo Basile combines the same functionality of the original Rota-Rod with additional new features:

- Silent Operation
- Stainless Steel Trip Plate for Easy Cleaning
- Touch Screen Display for Programming Experimental Parameters and Data Collection

Mouse Rota Rod consists of five rotating cylinders and allows for testing five mice, simultaneously. Height to fall is 16cm. Rat Rota Rod consists of four rotating cylinders and allows for testing four rats, simultaneously. Height to fall is 30cm.

Settings

- Speed: 5-80 RPM, in steps of 1RPM
- Mode: Constant speed, ramp (accelerating) and multi-step ramp
- Rotation: Forward, reverse and rocking

For another method, see page 123 for Stoelting's Parallel Rod!

Zero Noise!
XPAD Software
Included.

Ugo Basile Treadmill for Mice and Rats

Introducing Ugo Basile's Next Generation of Rodent Treadmills. Compact and user-friendly, the NEW Ugo Basile Treadmill can be used for both rats and mice. Experimental parameters are programmed into easy-to-use touch screen display. Endurance, distance (absolute and relative) and speed are automatically measured and recorded.

Features:

- Speed: from 3 to 100m/min, in steps of 1m/min amps
- Slope: positive (uphill) or negative (downhill), from -25 to + 25°, in 5° steps
- Shock: from 0-2mA (in 0.1mA steps), included
- Modes: constant, accelerating, custom ramps

Treadmill with Included Rat Lanes

Air-Puff Motivation Option Available

UGO BASILE TREADMIL FOR MICE AND RATS

Same device to test both Mice and Rats. XPAD Software Included!

Included Shock and Detection Unit

Ugo Basile Multi-Maze System

**Automate with ANY-maze!
See page 108.
Smooth, silent operation.**

 **ANY-maze Driven**

Ugo Basile Multi-Maze System

The Ugo Basile Multi-Maze for Mice is a modular system providing complete automation of spatial memory experiments including: Y-maze, T-maze and 8-arm Radial Arm Maze.

Use the Ugo Basile Multi-Maze to:

- Assess spatial memory
- Test basic working memory
- Discriminate working from reference memory
- Evaluate impairments in the working memory

Proprietary sliding doors retract into the maze floor smoothly and silently without disrupting the animal during testing. This sliding mechanism combined with the non-reflective, high contrast maze material provides optimal results with ANY-maze Video Tracking Software (sold separately as Product Number 60000, see page 108).

MULTI-MAZE SYSTEM	
67503	Ugo Basile 3-arm Standard Multi-Maze (Y-maze), Mouse

Ugo Basile Agora Maze/Forced Swim Test

 ANY-maze Driven

 ugo basile®
TRANSFORMING IDEAS INTO INSTRUMENTS

60441 Ugo Basile Agora Maze

Ugo Basile Agora Maze

The Ugo Basile Agora Maze is a new social interaction cage, designed after the SocioBox Method. The main principle is based on free choice by a subject mouse to spend time in any part of an open circular arena attached to 5 cubicles. Ideal for videotracking with ANY-maze!

The apparatus comes complete with central arena and 5 cubicles with blank walls. Detachable clear sliders divide each cubicle, and holes in the clear panels permit the exchange of odors.

UGO BASILE AGORA MAZE

60440	Agora maze, sociability apparatus for mice + ANY-maze Software
60441	Agora maze, sociability apparatus for mice, NO Software

Ugo Basile Waterwheel Forced Swim Test

Ugo Basile's Waterwheel Forced Swim Test is an automated alternative to the Porsolt Forced Swim Test. The Waterwheel Forced Swim Test consists of a water tank with a water wheel positioned across the center. Animals placed in the tank will attempt to escape by climbing on to the wheel, causing it to turn. The number of turns of the wheel provide an objective measure of escape behavior, eliminating the subjectivity of immobility measurements. Rotation encoder and temperature sensor included.

 ANY-maze Driven

Use with ANY-maze to automatically score number of rotations and perform statistical analysis.

Main Features:

- Compact and user friendly
- Automate up to 40 tests, simultaneously
- Eliminates subjectivity of immobility measurement
- Connects to ANY-maze for automated scoring and completed data analysis
- Continuous water temperature feedback

 ugo basile®
TRANSFORMING IDEAS INTO INSTRUMENTS

Connect up to 40 units on the same PC for high-throughput screening of antidepressants.

Intra/Extra-Dimensional (ID-ED) Attentional Set-Shift

NEW!

Ugo Basile Operon Attentional Set-Shifting Task

The Ugo Basile Operon is the ultimate intra/extra-dimensional (ID-ED) attentional set-shifting task for mice. This novel ID/ED Operon task is an effective preclinical tool for studying the executive dysfunctions and cognitive symptoms of psychiatric disorders. A dedicated version of ANY-maze software automatically manages all the Operon tools following a precompiled protocol and collects the data.

Features:

- Automated tridimensional stimulation (visual, odor, and texture)
- Two compartments each with an operant wall with lights, odor delivery, and revolving door
- Odor delivery system includes 2 channels and 10 independent flow meters
- Left and right nose pokes and pellet dispenser in each compartment
- Fully automated system through ANY-maze Video Tracking Software—includes precompiled protocol!

ANY-maze/Ugo Basile Fear Conditioning System

 **ANY-maze** Driven

ANY-maze/Ugo Basile Fear Conditioning System

The ANY-maze/Ugo Basile Fear Conditioning System is a state-of-the-art system for accurately detecting immobility, a behavior commonly associated with fear. The new design utilizes an on-board controller, allowing full atomization of all variables (sound, shock, and light) through ANY-maze.

The system employs ANY-maze Fear Conditioning Software to conduct contextual and auditory-cued fear conditioning paradigms and automate analysis of:

- Total freezing time
- Number of freezing episodes
- Duration of freezing episodes
- Latency between stimuli and freezing event

The system includes the following:

- ANY-maze Fear Conditioning Software
- New, on-board controller
- Shock-100Hz-40KHz; 1-150dB or white noise

- Sound-Constant Current 0.1-2.9mA in 0.1mA steps
- Dual visible/I.R. light
- Camera and Camera Lens
- Animal Enclosure with Electrified-Grid Floor
- Sound-Attenuating Chamber
- Context Kit to Alter Enclosure Environment

Ugo Basile Startle Reflex (PPI)

Ugo Basile Pre-Pulse Inhibition of Startle Reflex (PPI)

The Ugo Basile Pre-pulse inhibition of the Startle reflex (PPI) system can work with pre-pulses and pulse stimuli of several kinds (white noise, frequency noise, light, air puff). The PPI software allows for flexible programming of any kind of procedure with randomizations and seamless data capture.

Main features include:

- Automatic detection of Startle Reflex in mice
- Multiple Animal Boxes to match animal dimension
- Flexible testing, easy to set up. Simply define trial number, sound and light stimulus and timing of experimental sequences (all fully randomizable):
- Pulse
- Pre-pulse
- Inter-Pulse Interval
- Inter-Stimulus Interval

58002	Ugo Basile PPI/Startle Reflex System, 4 Cages
58003	Additional Mouse Unit for Startle/PPI

Ugo Basile Passive Avoidance–Step through

Ugo Basile Passive Avoidance–Step through

The Ugo Basile Passive Avoidance is used to assess memory function based on the association formed between a specific environmental context, which the animal learns to avoid and an aversive stimulus – represented by a mild foot shock.

Efficient and reliable.

Silent, automated sliding door divides the dark and light compartments. Systems for mice or rats. Manage up to 4 cages with one controller.

- The tilting floor ensures a simple and reliable detection mechanism to score the animal's movement across the two compartments.
- Easy, convenient testing using the 12-inch touch screen Controller:
 - Set up and manage both Passive and Active Avoidance Tests including the 8-pole shocker.
 - Connect up to 4 cages to the same Controller (using Expansion Box for each additional cage).
 - Data is recorded, displayed and stored in the control unit. Transfer test data to your PC using the USB key (supplied) for further processing using Excel, Access, etc.
- Set ups available for mice and rats.

UGO BASILE PASSIVE AVOIDANCE–STEP THROUGH

57550	Ugo Basile Passive Avoidance (step-through), Rat
57553	Ugo Basile Passive Avoidance (step-through), Mouse
57562	Extra Rat Cage for 57550
57563	Extra Mouse Cage for 57553

Ugo Basile Active Avoidance (Shuttle-Box)

Ugo Basile Active Avoidance (Shuttle-Box)

A set up for testing active avoidance (also called automatic reflex conditioner or shuttle box), i.e. learning to predict the occurrence of an aversive event, based on the presentation of a specific stimulus. Enables performance of a wide range of avoidance experiments using a flexible schedule. Precise detection of avoiding aversive event. Manage up to 4 cages with one controller. The Ugo Basile Active Avoidance (Shuttle-Box) enables the researcher to perform a wide range of avoidance experiments, each according to a flexible schedule (using Timeline feature).

Precise detection of animal crossing (moving to a different compartment). A tilting floor provides a simple, reliable detection mechanism for scoring animal movement across the two compartments. A partition with an intercommunicating opening at floor level divides the cage.

Measures recorded include:

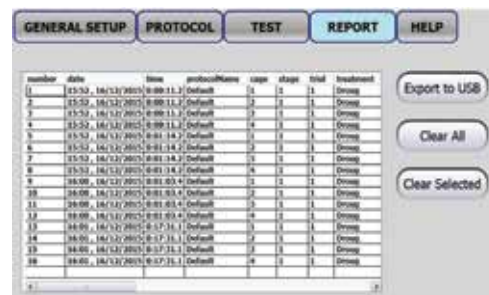

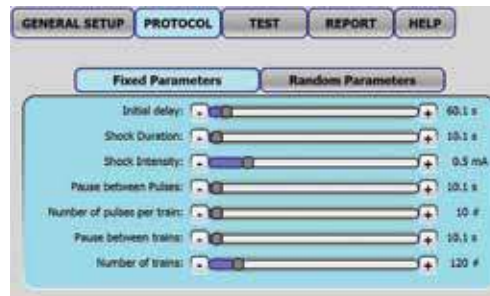

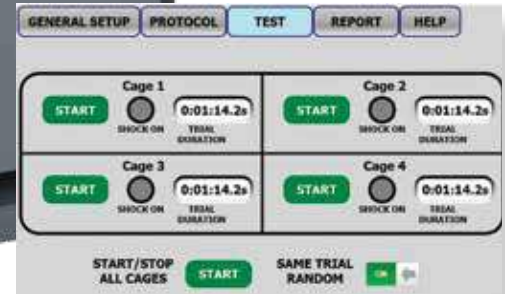

- Number of avoidances (the mouse crossing to the other compartment during the warning signal)
- Number of non-responses (the mouse failing to cross to the other compartment during the trial)
- Response latency (latency to avoid or escape)
- Number of intertrial responses (i.e. crossing the barrier within the intertrial interval)

UGO BASILE ACTIVE AVOIDANCE (SHUTTLE-BOX)

55532	Ugo Basile Active Avoidance, Rat
55533	Ugo Basile Active Avoidance, Mouse

Ugo Basile Learned Helplessness

Ugo Basile Learned Helplessness

The Ugo Basile Set-Up for Learned Helplessness is based on a sophisticated generator of unpredictable random shocks delivered to the grid floor of a rodent box where no escape is possible. Electric shocks can be randomized in terms of shock length, interval and complex trains can be programmed.

- A sophisticated generator of unpredictable random shocks delivered to the grid floor of a rodent box (dark isolation cube) – rat and mouse models.
- Easy set up using a 12-inch touch screen controller. Randomize shocks based on time duration as well as intervals between shock events. Schedule a complex train of shock events.
- Up to 4 animals can be controlled simultaneously in 4 independent boxes using one touch screen controller.
- Easy data collection. Includes user-friendly reporting software to collect, visualize and export data into spreadsheets such as Excel.
- Optional expansion box available for multiple cages.

57800 Basile Electroconvulsive Device

Designed for inducing convulsions.

Ugo Basile Electroconvulsive Device

The Basile Electroconvulsive Device is designed for inducing convulsions in research animals. Consistent, reproducible current levels are produced by feedback circuitry that adjust for variance in impedance of the contact from animal to animal.

The impedance to the animal can be pre-measured and displayed, and a warning signal flashes if the impedance is too great to deliver the desired current level. The Electroconvulsive Device is supplied with auricular (ear lobe) electrodes.

UGO BASILE ELECTROCONVULSIVE DEVICE

57800	Basile Electroconvulsive Device
57802	Auricular Electrodes (included)
57803	Corneal Electrodes, optional
57805	Foot Pedal, optional
57808	Biphasic Unit, optional

If your main power supply is 220V, add a "V" to the product number.

Ugo Basile Lesion-Making Device

This compact, solid state direct current (DC) Lesion Maker has been designed for the production of localized lesions in small animals. The current generator is protected against short circuit, which prevents the electronics from getting damaged when the electrodes accidentally come into contact with each other.

The Basile Lesion Making Device provides constant DC current in mA from 10 to 99.99 mA. The pulse duration may be timed by the instrument between 1 and 99 seconds, or manually controlled.

A yellow LED warns when the impedance is too high for the preset current. The current generator is protected against accidental short circuit of the output. Maximum electrode resistance is 20 M Ω (10 μ A) down to 2 K Ω (100mA) and Compliance Voltage is from 1-99V.

Comes complete with set of three output plugs.

Startle-Response Laboratory (SR-LAB™) System

The Startle-Response Laboratory (SR-LAB) System is the world's most widely-used startle-reflex behavioral research system, and the most successful for measuring Startle Habituation, Pre-Pulse Inhibition (PPI) and Fear Potentiated Startle (FPS).

Execute any—and all—startle-reflex testing paradigms using the SR-LAB Software and specialized additional kits.

The SR-LAB basic system includes:

- Test cabinet made of composite ABS plastic
- Animal enclosure in choice of standard sizes
- Power supply
- Input and Output cables
- Animal enclosure base
- Software and User Manual
- Software utilities for data analysis

Please specify Animal Enclosure upon ordering:

- Small Animal Enclosure—10-25g
- Small/Medium Animal Enclosure—25-50g
- Medium Animal Enclosure—50-150g
- Large Animal Enclosure—150-450g
- X-Large Animal Enclosure—450-800g

The world's most widely used startle-response system!

Grip Strength, Pain & Inflammation

Touch Test™ Sensory Evaluator

The Semmes-Weinstein von Frey Aesthesiometer is used for clinical and preclinical assessment and diagnosis of hyper- or hypoesthesia.

The Touch Test Sensory Evaluator Kit features:

- Set of 20 Nylon Monofilaments
- Force Range 0.008-300g
- Retractable Mechanism to Protect Filament

The Semmes-Weinstein monofilaments provide an approximate logarithmic scale of actual force and a linear scale of perceived intensity. Rodents exhibit a paw withdrawal reflex when the paw is unexpectedly touched. The Touch Test Sensory Evaluator can be used on plantar surfaces of the mouse or rat paw. The animal indicates sensation by pulling back its paw. Kit includes set of 20 retractable monofilaments and protective case. Optional base assembly includes perforated metal base with stand and multi-configuration animal enclosures. Individual filaments also available for purchase.

JVP Domes

The JVP Domes are the most sensitive method of measuring human tactile spatial resolution.

The set includes 8 acrylic probes with bar/groove widths measuring 0.35, 0.5, 0.75, 1.0, 1.25, 1.5, 2.0 and 3.0mm. Each probe has a columnar handle and a dome shaped head. The head has an alternating ridge/slot pattern of different width for each probe. The ridged head is pressed against the skin, and the patient/subject must report the alignment of the ridges, longitudinal or transverse. An extensive bibliography is available, including normative data on various body surfaces. Set comes with an illustrated manual with several citations.

Automated Scratch Counting for Mice

The real-time, long-term, quick, and accurate quantification of scratching behavior in mice

Scratching behavior is a critical biomarker for many laboratories, and important for drug development. Quantification of scratching behavior manually is subjective. The novel Automated Scratch Counting Instrument for Mice calculates frame-to-frame differences by capturing the animals' behavior with image processing software.

The high-speed camera contains an image-processing system enabling real-time quantification of scratching behavior of mice. Records and analyzes scratching behavior continuously for up to 24 hours.

The recording platform has a built-in infrared light panel. Records scratching behavior, in a natural state, using the invisible near-infrared light. This system allows evaluating of scratching behavior not only in regular light but also in the darkness.

Output Data:

- Number of scratching behaviors
- Duration of scratching behavior
- Graphical representation of scratching behavior
- Test up to 4 mice at one time

Animal Identification

Laboratory Animal Ear Tags

- Ear tags are numbered from 1-100 (available up to 999)
- Available in 5 colors (1.Red 2.Green 3.Blue 4. Light Blue 5.Black)
- Once applied, they cannot be easily removed
- Laser-etched number provides durability
- Custom numbering available (contact for details)
- Easy-to-read
- Corrosion resistant

Small Animal Ear Tags are specially suited for use with small lab and research animals (mice, rats and other rodents). The lightweight easy-to-read tags allow for trouble-free identification.

Ear Tag Applicator (sold separately) is required for application. Please specify number sequence when ordering.

56791 Ear Tag Applicator (sold separately)

Stainless steel Ear Tags available! StoeltingCo.com for details.

Ear Punch

Ear punches used for notching or punching mouse or rat ears at weaning for easy identification. The 56718 and 56719 have ergonomic handles for easy control. All punches are made of Stainless Steel. Instruments are for non-clinical use only (not for human use).

EAR PUNCH

56719	Ear Punch, 2mm hole, 4in
56717	Thumb Print Ear Punch, 2mm hole, 2in
56718	Ear Punch, 1mm hole, 4in

Animal Markers

The Animal Marker was developed for easy, long-lasting identification of laboratory animals. Unlike permanent markers and art markers, which can contain chemicals harmful to animals, Animal Marker use “legal pigments,” which are approved and regulated by the Japanese Ministry of Health, Labor and Welfare, for use in food, drugs and cosmetics. These pigments are nontoxic and devoid of any hazardous materials. For use on the rodent’s coat. Color will not remain on the animal’s skin.

Features:

- Nontoxic and devoid of any hazardous materials
- A single marker can be used to mark 300-500 rats (depending upon animal size and/or applied area)
- Once applied, colors remain for 6-12 weeks
- Standard and fine tip markers available

ANIMAL MARKERS

Unique Products

NEW! Vaginal Estrous Cycle Monitor

- The best method of determining proestrus stage
- Powerful tool for the improvement of reproduction efficiency
- Simple operation
- Battery operated

Does not affect reproduction or pregnancy rates.

The Rat Vaginal Impedance Monitor is designed to obtain precise information to determine the optimum day for mating during the rat estrous cycle.

The conventional method (vaginal smear method) is a troublesome procedure requiring skill, time and labor.

The electrical impedance of the epithelial cell layer of vaginal mucosa is measured at the frequency of 1 kHz by insertion of the probe into the vagina. In the proestrus stage significantly higher impedance is produced compared to that in the other stages of the estrous cycle. 3 kohm of impedance can be considered a standard for indicating proestrus stage. Measuring range is 0-19.9kohm.

The Rat Vaginal Impedance Monitor is a reliable time and labor-saving device. Operation is so simple a novice can easily use it.

Important Notice: The 59160 was developed exclusively for Rats. A Mouse probe is available, but test results can not be guaranteed.

SPECIFICATIONS

Range	0-19.9 kohm
Accuracy	+/- 1% +/- 1 digit
Display	LCD
Battery	4 Rechargeable Battery (Ni-MH) / 30 hr Battery Life
Dimensions	90W x 135D x 35mmH
Weight	Approximately 200g (battery excluded)

VAGINAL ESTROUS CYCLE MONITOR

59160	Electronic Vaginal Estrous Cycle Monitor, Rat
59161	Mouse Probe (50mm x 3.5mm O.D.)
59162	Replacement Rat Probe (55mm x 4.5mm O.D.)

Automated Milker for Rat and Mouse

- Ideal for the analysis of breast milk composition

The Automated Milker provides researchers the ability to collect Rat/ Mouse milk directly from the teat. The Milker collects milk from lactating mothers by alternating negative and atmospheric pressures through two solenoid valves and a vacuum pump attached to a microcomputer.

Environmental pollutants, in particular carcinogenic substances and endocrine disrupting chemicals, are a worldwide concern. The influence that these substances have on babies and their development, through breast or cow milk, is of great concern. The ability to gather milk from Rats and Mice, widely used experimental animals, will aid in advancement of research in this area.

Automated Milker,
Rat and Mouse

AUTOMATED MILKER FOR RAT AND MOUSE

59150	Automated Milker, Rat and Mouse
--------------	---------------------------------

OiS200 Modular Optical Imaging System

The Modular Optical Imaging System (OiS200) can perform:

- Intrinsic Optical Imaging
- Fluorescence Imaging

OIS200 MODULAR OPTICAL IMAGING SYSTEM

55790	OiS200 Modular Optical Imaging System
--------------	---------------------------------------

ADD-ON:

55790-1	Intrinsic Signal Optical Imaging
55790-2A	Fluorescence Imaging: Other wavelengths, 475nm, (other wavelengths available)
55790-3	Speckle Imaging
55790-4A	Optogenetic Stimulation 1-D
55790-4B	Optogenetic Stimulation 2-D
55790-5	Dual Camera Imaging, Add-on

Intrinsic Optical Imaging and fluorescence are a easy and minimally-invasive method for observing brain activity in vivo over a large area of the cortex.

- Speckle Imaging—quantify cerebral blood flow on surface vessels.

The imaging platform is portable and easy to set up. It offers great configuration flexibility from different camera options to illumination solutions. All images are acquired via a user-friendly software. The system allows imaging up to $\pm 30^\circ$ angle. The height can also be adjusted. Illumination arms can be installed in multiple configurations. The plate is made of high-quality steel allowing the user to use magnetic accessories.

Applications

- Cerebral blood flow, neurovascular coupling & functional connectivity studies
- Neurological disorders
- Pharmacology
- Optogenetics

Imaging Options

- Intrinsic Signal Optical Imaging (IOI with red, amber and green LEDs)
- Fluorescence Imaging (475 nm LED and others available)
- Laser Speckle Contrast Imaging (LSCI)
